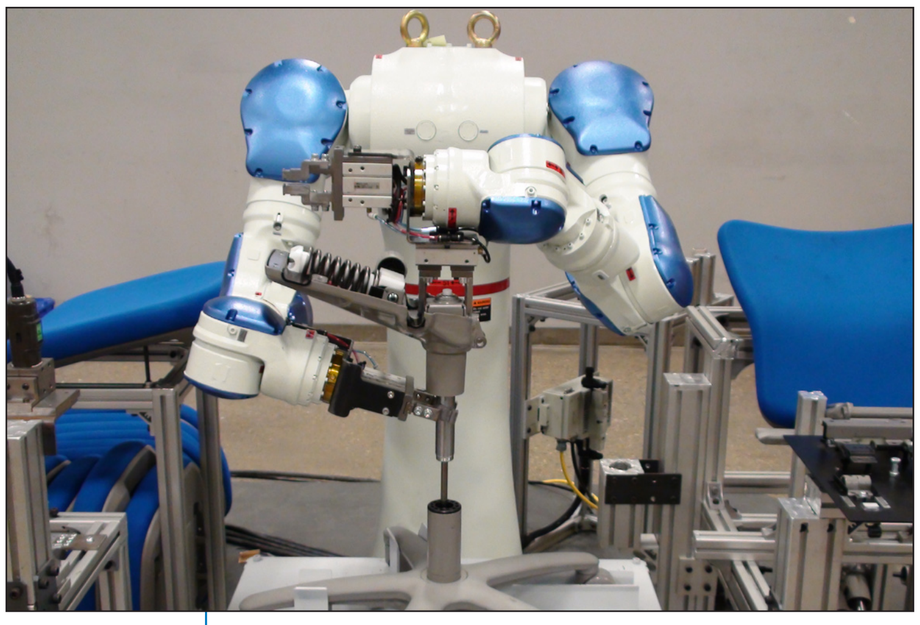
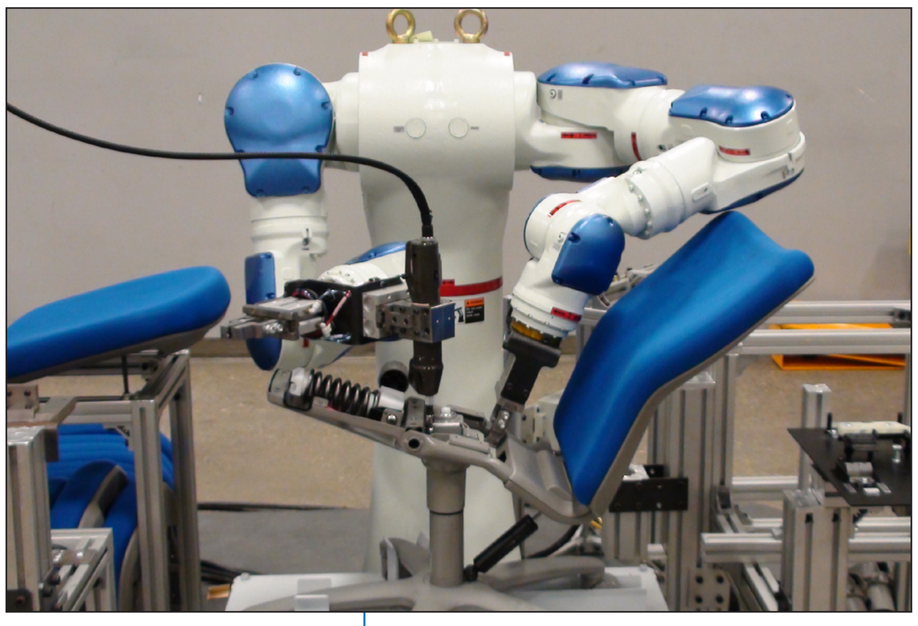
Dual Arm Robot Advantages

You Can't Do This With Any Other Robot!



TWO ARMS POSITION SUBASSEMBLY INTO BASE

- "Human-like" flexibility
- Outstanding range of motion in tight spaces
- Small space required for robot installation



ONE ARM HOLDS CHAIR IN POSITION;
SECOND ARM ATTACHES BRACKET

- Two arms perform independent "human tasks"
- Simple, less expensive tooling
- Eliminate "work-arounds" needed for standard robots
- High-speed communication available for external sensor-based control
