CASE Solutions®
Endoscope Bedside Kit

Introduction:

Endoscope reprocessing has been on ECRI's Top Ten List of Health Hazards for many years. Case Medical has designed an all-in-one Endoscope Bedside Kit that can start the pre-cleaning process in the procedure room, while the endoscope is still connected to the video processor and light source. The kit includes twelve 250ml bottles of U.S. EPA Safer Choice awarded, low foam, multi-enzymatic PentaZyme® detergent supplied ready to use and twelve packets of PentaWipes® cleaning wipes, each with three single use wipes.

Point of use treatment is a crucial step in the reprocessing of flexible endoscopes. According to AORN, "Pre-cleaning flexible endoscopes at point of use eases and improves the cleaning process and helps reduce the formation of biofilm, which can interfere with subsequent high-level disinfection or sterilization." The Endoscope Bedside Kit allows removal of gross soil from the external surface of the insertion tube and flushing the biopsy/suction channels. Multiple enzymes work to break down any remaining traces of bioburden.

Directions for Use:

CSEKIT12
12 per case

- Open the packet of PentaWipes surface wipes
- Remove one wipe at a time
- With a single pass, wipe from the clean end (posterior) to the soiled end (distal tip) to remove the gross soil on the surface of the endoscope
- Discard in container designated for contaminated items
- Repeat using second and third wipe, as needed
- Always wipe from clean to soiled end and discard to avoid recontamination
- Open the accompanying bottle of PentaZyme multi-enzymatic solution and suction the ready to use solution through the lumens and channels
- Package per facility policy and transport to the decontamination area for further processing
- Follow with cleaning, high-level disinfection, and/or sterilization

Storage Conditions:

- The Endoscope Bedside Kit is validated for one (1) year shelf life
- Store at room temperature (10°C to 25°C) away from heat source
- Keep container closed when not in use

Caution:

- Wear appropriate personal protective equipment (PPE) when handling contaminated devices and chemicals
- May cause allergy or breathing difficulties
- Hazard class not classified
