

CYBERSECURITY

Cerritos Community College and the Automation Federation invite you to attend an informative, free seminar on June 6, 2014 to learn more about the Cybersecurity Framework recently released by the National Institute of Standards and Technology (NIST) and called for by President Barack Obama's executive order in early 2013. Representatives from the White House, NIST, and leading cybersecurity subject matter experts will explain the importance of the Cybersecurity Framework, and will illustrate why industrial automation control systems (IACS) security standards are such vital components of the framework and essential to its successful implementation. Also supporting the event is California Manufacturing Technology Consulting® (CMTC).

Participants will learn:

- How woefully under-prepared American industry and critical infrastructure are to prevent cyberattack on IACS, which could result in severe economic and environmental damage, significant operational impairment, and public endangerment
- The role and value of ANSI/ISA99, Industrial Automation and Control Systems Security standards (also known as IEC 62443) in preventing and mitigating cyberattack and security breaches
- All the key provisions and essential details of the Cybersecurity Framework

Cybersecurity Framework for Protecting our Nation's Critical Infrastructure

June 6, 2014 • 8:00 a.m. to 12:00 p.m.

Cerritos Community College
HSB Multipurpose Room - First Floor
Science Building (S) 202 (located off of Studebaker Road)
11110 Alondra Boulevard
Norwalk, California 90650

There is no cost for the seminar.
