

Signature Blankets

SBC-saturated Blanket Cloth

DBC-Dry Blanket Cloth

IC-Impression Cylinder

deliver performance
and quality

Signature SBC (Saturated Blanket Cloth), Signature DBC (Dry Blanket Cloth) and IC (Impression Cylinder) deliver performance and quality to the automatic blanket wash systems of today's presses. They are manufactured with an everlasting, low-to-no-shed fiber, allowing for increased strength and dimensional stability. The advantage of these considerably fine fibers creates an abundance of surface area resulting in superior cleaning capabilities while reducing the amount of solvents and VOCs needed to do the job.

Signature SBC, DBC and IC are available for Heidelberg, Komori, Manroland, Mitsubishi, and others. Fujifilm is also able to custom manufacture one for your specific press. Contact your Fujifilm Consumable Specialist to see how our Signature SBC, DBC and IC can make a difference. Fujifilm's Signature products

Signature Blanket Features:

Signature SBC

- Zero VOC solvent
- Patented micro fiber lint limiting textile
- Compatible with most conventional, UV and HUV inks
- Compatible with most conventional and UV blankets
- Can reduce cloth usage by 20-50%
- Reduces paper waste and downtime due to improved cleaning capabilities
- Rolls can be made for virtually any press make and model
- Endorsed by major press manufacturers and industry regulatory agencies

Signature DBC

- Dual-layer polyester textile
- Durable and highly absorbent
- Excellent cleaning characteristics with little to no lint
- Soft and yielding – will not scratch blankets
- Rolls can be made for virtually any press make and model
- 500mm rolls available

Signature IC

- Great for Komori presses with anti-marking material on back cylinders
