# Water Resources

The careful management of Water Resources is an important responsibility for local, state, and federal agencies. Rincon Consultants staff have extensive experience helping clients navigate their projects through the regulatory process; from project initiation to construction completion. Working closely with clients and agencies, we plan, permit, and implement a variety of water resources projects, including water storage and distribution, recycled water, flood control, watershed management, and water rights permitting. We strategically carryout such projects with a focus on effective project communication, stakeholder management, and achievement of project objectives. All the while minimizing environmental impacts so they are consistent with resource management goals.

Our team of water resources specialists consists of certified Qualified SWPPP Developers, Qualified SWPPP Practitioners, and Certified Inspectors of Sediment and Erosion Control. As part of our ongoing SWPPP preparation training, Rincon Consultants staff is active in trainings/workshops offered by the State Water Resource Control Board (SWRCB) and local Regional Water Quality Control Boards (RWQCBs).
