

Profile

Mozart Page Mill

Size: 20,280 Square Feet

Location: Palo Alto, California

Challenge *Aged BUR Substrate*

- Install a long-term roof system while the building remains occupied.
- Improve solar reflectivity with Title 24 compliant acrylic coatings.
- Create a sustainable system that will eliminate the need for a costly tear-off.

Solution *AcryPly® Roof Restoration System*

- 20 year system was installed using modified asphalt emulsion and high performance acrylic coating.
- System was able to be installed with no interruption to owners' tenants working inside.
- System is sustainable and can be re-coated to extend the life of the system indefinitely.

"The Mozart Page Mill project in California required us to tackle the occupied office buildings within a tight time frame. The building owners wanted to be sure that National Coatings inspected all the buildings before, during, and after the new roof installation, as per the terms of the warranty. Micah Smith (NCC Technical Rep) came out on several occasions to make sure we had everything we needed to keep the roof system application up to specification. This was very helpful in keeping a smooth workflow and completing the job on time." Scott Siemer, President at Just Leaks, Inc.
