HOMEBASE

Size: 95,000 Square Feet

Location: Vacaville, California

Challenge *BUR Capsheet Roof*

- Undersized evaporative cooler system.
- Uncomfortable shopping environment during summers.
- Constrained budgets.

Solution *AcryShield® Restoration System*

- Cut peak roof surface temperatures by 53°F.
- Reduced peak power demand by 10%.
- Increased comfortable shopping hours by 14%.

Even with a badly designed cooling system, the HomeBase project shows big box retailers an effective maintenance approach to increasing the energy efficiency and comfort of their stores while prolonging roof life and avoiding eventual high-cost re-roofs.
