

Health Data Vision, Inc. and Pyxis Health Solutions Form Strategic Partnership

Health Data Vision, Inc. (HDVI), a healthcare analytics company providing SaaS-based solutions for clinical data collection and analysis, announced a strategic partnership with Pyxis Health Solutions to provide a complete member-centric care cycle management solution for health plans.

Burbank, CA ([PRWEB](#)) April 01, 2014 -- The joint solution combines each company's core SaaS products and offers a fully integrated platform capable of mining disparate data streams at a health plan, gaining valuable additional clinical information from providers. Key features include workflows to take systematic action across a range of areas: care management, provider outreach, member outreach, revenue optimization and cost management.

Pyxis' ROI platform, Galileo, allows health plans to see a holistic member-centric view of their data. "Our Galileo platform is a natural fit to be complemented by HDVI's solution, which is probably the best workflow solution for current and future health plan needs in the industry," says Scott Weiner, Managing Co-Founder of Pyxis.

HDVI's MRCS platform provides a fully integrated workflow solution to locate, retrieve and analyze medical records from any provider and any medical records system. Michael Klotz, CEO of HDVI states, "We are very excited about this partnership because Pyxis provides all the analytics components that more and more of our customers are starting to ask for. Growing demands, limited resources and tighter timelines make a comprehensive, flexible platform that addresses all aspects of the care management cycle imperative to running a competitive health plan."

"This partnership brings together some of the brightest minds in risk adjustment, quality and care management, process automation and SaaS in healthcare. This combination ensures that the data analytics will be the cleanest possible with full transparency and access on the MRCS platform, while providing real-time knowledge which is immediately actionable towards finding the gaps and enhancing patient care," says Shana Carrico, Principal at Carrico & Garton Group, LLC, a healthcare consulting organization.

The two companies offer a combined solution effective immediately. A fully integrated platform release is planned for later in 2014.

About Health Data Vision:

Health Data Vision, Inc., provides a SaaS-based healthcare analytics platform for medical records analysis and targeted solutions for HEDIS® Hybrid, Medicare and Exchange Risk Adjustment and comprehensive, year-round clinical data analysis efforts as well as RADV Audits. The platform provides flexible scalable workflows and automation for medical records-intensive project needs of health plans in the United States.

HDVI's patent-pending, process-centric approach provides state-of-the-art automation, quality and audit features, and real-time analytics; all critical for successful medical record review initiatives.
