

MOCK RADV

Health Data Vision's Mock RADV offerings are designed to expose the full spectrum of strengths and weaknesses of a client's readiness for RADV, both from a logistical and results perspective. Logistical aspects are primarily focused on accessing and coding medical records in the appropriate time frame. Results parameters consider how well submitted HCCs are supported by diagnoses, which diagnoses have been over/under-coded and a number of other considerations, including the identification of opportunities for care management/encounter planning.

HDVI's MRCS platform offers an efficient way to manage all aspects of RADV and Mock RADV projects. Our experts assist clients during the preparation (determination of eligible population, member selection simulation, outlier identification, etc.), as well as comprehensive post-effort analysis.

WHAT IS INCLUDED?

- A selection of a 201-member sample based on the CMS selection criteria
- Additional member selection sets (Optional)
- Chart Collection
- Chart Audit and Overread
- Medical Record Selection Ranking
- Pre- and Post-Analysis
- RADV Readiness Assessment and Recommendations
