

Specialty Technical Publishers and Solutionwhere Launch Auditwhere™, a Software Program Designed by Auditors for Auditors

Addressing Common Auditing Issues in a Flexible and Adaptable Way

North Vancouver, B.C., Canada ([PRWEB](#)) January 30, 2014 -- Specialty Technical Publishers, premier North American publisher of [audit, compliance and risk solutions](#), today announced the launch of a partnership with Auditwhere™, a new program, designed by Randy Roig, former Chairman of the Environmental Auditing Roundtable, to address common issues facing typical auditing software programs. Auditwhere™ is designed to be easy to navigate and use, flexible and adaptable—working the way auditors work.

Randy Roig explains: “The goal is to provide a “Best in Class” audit management system that excels in the way it handles the risk assessment/audit process. Auditwhere™ was designed for and by auditors to work the way they work. Auditwhere™ is flexible, powerful, provides a unique overview/review process, and even has an optional mobile app.”

Auditwhere™ creates faster, more comprehensive audits quickly using time-saving features, including:

- Assigning topics/rulebooks/sections/questions to auditors quickly.
- Tracking the status of the completion.
- Tracking and reviewing suggested pre-audit preparation items and adding custom items, assigning them to either members of the audit team or to facility staff and, if appropriate, tracking their completion status.
- Screening only for specific questions and information about the individual site that is to be audited.
- Setting up a corporate structure, schedule audits, populate auditor ranks, and route reports for review.

Auditwhere™ creates more efficient audits with less superfluous detail, by:

- Conducting applicability analysis, quickly excluding sets of scoresheet questions that do not apply to the site.
- Downloading a rulebook to a mobile tool (such as an iPad®) and taking the scoresheet into the field.
- Adding custom questions to an existing scoresheet.
- Attaching pictures, documents, or other types of files to an individual finding.

Auditwhere™ provides meaningful results because its reporting engine:

- Conducts a KATTARS root cause analysis on any or all audit findings and builds a first-order root cause table and graph.
- Exports audit results in Excel®, csv, or PDF for use in various styles of reports or for input into your current tracking system.
- Defines and uses scoring systems ranging from “no score” to the use of complex ranking matrices.
- Flags questions as “special attention”, independent of the type of audit finding, and pulls these items together in a report.
- Reviews audit results with flexible or standard reports. This includes the ability to review a “spreadsheet” of audit findings, make edits and save it back into the audit.

“Flexible and straight-forward, Auditwhere's Audits are easier to create, organize, and conduct.” - George Gilmore, President, Solutionwhere, Inc.
