RAM 35-ACGIH DRY STRIPPING CABINET

1200 CERTIFIED CFM WITH 732 SQ FT OF FILTER AREA FILTERS 99.8% TO 0.3 MICRONS

BUILT IN HEPA FILTERS 99.97% TO 0.3 MICRONS

RAM 35 dust collector features 20 air changes per minute in the blast enclosure, 1200 Certified CFM and optional HEPA filtration.

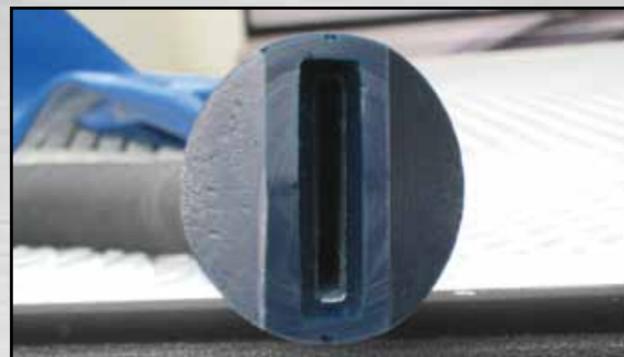

The 7-inch diameter hose and massive cyclone prove this baby sucks! Generous pressure vessel gives tons of blast time even with large nozzles.

Fire!

Included locking lift handle and multi-size drum cover means Operators do not deal with dusty drawer disposal. The drum cover is compatible with most drums from greater than 55 gallon downward.

Pauli Systems FanBlast Nozzle doubles production compared to any other nozzle of equal bore size.

HUGE 30" X 15" WINDOW

MEETS ACGIH REQUIREMENTS

THE RAM 35-ACGIH
DRY STRIPPING CABINET

The RAM 35-ACGIH Multi-Media Dry Stripping Cabinet gives you a spacious dust-free direct pressure blasting chamber to efficiently strip and clean small components and large work pieces. And the RAM 35 complies with the stringent requirements of the American Conference of Government Industrial Hygienists (ACGIH) Section 10.80.1, Figure VS-80-01.

Meeting ACGIH requirements provides 20 air changes per minute in the 5' wide by 4' deep by 3' high blasting enclosure—1200 Certified CFM of powerful, dust-clearing ventilation.

Full size door allows maximum size work pieces.

Three banger dust collector with locking dust discharge lift handle and lid; easy change dust drum; no messy dust drawer. Handle and lid included; 55 gallon drum not included.

Massive 7.5 HP motor drives large diameter blower that combined with the "stealth technology" silencer provides world-class ventilation with a quiet workplace.

Massive window, bright explosion-proof lighting, and full system controls save Operator time, speeds production.

- **Superb Performance, Ruggedly built, 24/7 Continuous Duty Machine**
  The RAM 35-ACGIH gives Operators an almost unheard of 20 air changes per minute in the working chamber, which means dust is quickly cleared from the work piece. Visibility is unhindered and production maximized.

- **No Messy Dust Drawer**
  The RAM 35 drops waste into your 55 gallon (or other size) drum. To dispose of dust, lift locking handle and drum cover (provided), install your latching cover, and remove filled drum with pallet jack or fork lift. There is no manual handling of the dust container.

- **Reclaim Media—Reduce Costs**
  Exclusive fine tunable reclaiming of media yields optimum production from each pound of blast medium. Pauli cyclone separators are recognized as the multi-media champions. The separation is dual adjustable via air wash cones and bleed air vents, so the machine handles all blast media, and is extremely effective with starch, plastic and nano-composite media.

- **Direct Pressure Blast Cleaning With Exclusive Media Aeration**
  The RAM 35 dry stripping cabinet provides a self-contained and highly productive blast area that does not pose a toxic hazard to the environment as is caused by liquid chemical strippers. Exclusive aeration section in lower pressure vessel ensures smooth pulse-free flow.

- **Bright, Explosion-Proof Lighting and Massive Ventilation in the Working Environment Improve Productivity**
  We improved your working environment so you can improve productivity. What's more, working on detailed parts is easier as a continuous rush of fresh air sweeps through the cabinet providing excellent visibility. Dust laden air is carried to a set of dust collector cartridges for high efficiency filtering. Cleaning is via reverse pulse air jet.

- **Choose the Exact Style and Option for Your Application**
  Already packed with many standard features, the RAM 35 is available in several models and options to custom tailor a cabinet to your exact application.
