1. Is The Turf Made Of Nylon Or Polyethylene?

Nylon is old technology that the old AstroTurf carpet was made of, which can fade and absorb odors. Nylon fibers become brittle over time and lack the plush, soft feel of the polyethylene blades in Heavenly Greens products. The best products to purchase are Monofilament systems offered by Heavenly Greens.

2. Has The Product Had Proper Testing And Been Proven In All Types Of Prior Installations?

Many brands are new to the synthetic turf market and have not been tested over time in “real world” installations. Heavenly Greens only carries the best artificial turf products, including FieldTurf. FieldTurf is used by 21 NFL teams including more than 3000 installations in 50 countries. FieldTurf is preferred by top dog kennels and day care centers for its soft feel and unmatched durability. Heavenly Greens installations represent millions of square feet; we have over 7500 installations throughout Northern California.

3. How Is The Turf Designed To Drain?

The majority of products on the market today have non-porous backings that have holes manufactured into them for drainage. If you have pets or live in an area with poor drainage, the material you choose can make the difference; hole-punch, hot-melt, channel or perforated backings can all drain differently in the long run. FieldTurf’s new MaxxFlow systems offer superior drainage (up to 64 inches per hour) which make these products ideal for pet owners and offer exceptional erosion control.

Heavenly Greens’ MaxxFlow system drains much better than real grass.

4. Is The Product In-filled Or Non-infilled?

Heavenly Greens offers both types of products. Non-infill products are generally used for beautification and more esthetically driven needs. The in-filled products, offer more cushioning, longer sustainability and better running performance. Depending on what type of installation application you need, Heavenly Greens has the right product for you. FieldTurf’s monofilament systems contain a patented sand and cryogenic rubber infill that holds the blades upright providing a soft resilient feel year after year.

5. What Type Of Base Is The Company Proposing To Install For You?

There are companies that may tell you NO base is needed, and others that claim an inch or two will do. With thousands of installations throughout the entire Bay Area, Heavenly Greens knows that a proper base is the vital foundation that will keep your lawn investment looking great for years to come. A full 3 inches is needed for stability and proper drainage.

Heavenly Greens ensures that the proper foundation has been laid first.

6. What's The Warranty On The Turf?

Read the fine print. Some companies only warrant against fading, and some have no written warranty at all! Heavenly Greens offers an unmatched warranty – up to 15 years of product protection! Our products are covered from 8 to 15 years.

7. Is The Installer Fully Licensed And Insured?

Many companies that offer turf have been coming and going the past few years. Be sure the company you choose has a California state contractor's license and a special D-12 attachment. Heavenly Greens has them, along with all required insurances that protect you as a homeowner.

8. Does The Company Subcontract Any Of The Work?

Many turf companies sell turf, but then hire another company to perform the actual installation. When trouble arises, who will take the responsibility? Heavenly Greens handles the entire process from sale to cleanup, and backs it all in writing, giving you undivided responsibility.

About Heavenly Greens

Heavenly Greens is Northern California's leading provider of artificial grass and synthetic turf systems for both residential and commercial artificial turf landscaping. Founded in 2001, our focus is providing only the highest quality synthetic turf products available to the market. Artificial grass applications include; homes, business, golf courses and putting greens, dog facilities and day cares, sports fields and more.
