

LEADING MANUFACTURERS MAXIMIZE ERP USAGE

Enterprise Resource Planning (ERP) solutions are ubiquitous in today's manufacturing organizations. In fact, 97% of Leaders have implemented an ERP solution in addition to 88% of Followers. While ERP is widely used by manufacturers, those that use it most successfully do a better job of utilizing more of the solution's features and functions. Leaders are more likely to take advantage of individual modules, such as production scheduling and order management, as well as emerging technology, such as embedded analytics, social, and mobile. But how are top performers using ERP to improve their business capabilities?

Leading manufacturers are:

as compared to followers.

The bottom line: Leading manufacturers make ERP the foundation of their business. By doing so they are able to drive significant improvements, such as the 12% improvement in operational costs that Leaders have experienced as a result of ERP. To take advantage of these improvements, identify the most pressing concerns throughout your organization and expand ERP usage. The results will be a more effective, efficient, and profitable manufacturing organization.
