YSoft SafeQ

YSoft SafeQ is a unique print management solution which gives you perfect control over corporate printing, boosts productivity, protects sensitive information and reduces overall printing costs.

Let you and your staff save energy for creative work that machines cannot replace and concentrate on key projects.

With YSoft SafeQ your work will be:

Economical

Save up to 30% of costs
by reducing print volume and making printing processes more efficient.

Efficient

Boost the efficiency of your staff
by making their access to printing, scanning and copying easier.

Secure

Prevent unauthorised access
to your confidential documents during printing and scanning.

Ecological

You can protect the environment
and prevent paper and energy waste.

YSoft **SafeQ**

YSoft SafeQ analyses each printing operation and decides if a specific operation shall be carried out or if it can be avoided. All information about these operations is stored onto a server so that you can make a detailed analysis of your printing environment. The result can include reports and statistics on users, departments and projects which can help you in defining your corporate printing policies by using your multifunctional devices and printers more efficiently.

Accurate cost accounting, high security, guaranteed availability and advanced functions for document digitalisation are some of the many benefits of the YSoft SafeQ printing solution.

Security & Rights Management

- protection against unauthorised use of printing through YSoft SafeQ terminals
- user authentication by PIN, magnetic/chip card and/or username and password
- easy allocation and administration of printing rights for different users, roles or departments
- immediate overview of who is printing what documents and on what device
- easy definition of access rights and permitted printing methods

Print Management

- secure printing with Follow-me function for picking up print jobs on any printing device
- shared queues for sharing print documents across departments or between senior employees and staff
- print job management via a web interface or directly on the device (deleting, adding to favourites), even after sending a job to print
- printing rule system for editing documents before printing to prevent paper and toner waste
- picking up print jobs in any subsidiary without geographical or technological restrictions

Private Cloud

- central administration and monitoring of a printing service within the entire company, including subsidiaries and via a single web interface
- automated distribution of settings to all locations
- optimisation of network operation
- provision of print services in all locations, even in the event of a central server failure

Monitoring & Reporting

- accurate monitoring of all printing, copying and scanning
- set of standard reports for easy to read overviews based on users, departments and projects
- opportunity to generate specific reports customised to your needs and wants
- reports providing evidence of the positive impact that YSoft SafeQ has on the environment
- automatic reports sent to e-mail or folders in selected format (html, xls, xml, csv, PDF)

Scan Management

- automatic scanning with a single click to user e-mail or folder
- definition of scanning processes with document parameters
- possibility of creating complex scanning workflows

Raiffeisen X

”YSoft SafeQ forced our staff to think more about what they really need to print. Thanks to that, our print volume and costs dropped immediately by 30%.”

Ivan Senekovič,
IT&C administrator
Raiffeisen Bank International
