Quantex Laboratories Moves to Larger NJ Facility, Confirms Commitment to NJ Life Sciences Industry

Cranbury, NJ – February 17, 2013 - - Quantex Laboratories, Inc., today announced the expansion of its GMP analytical laboratory with its relocation to a larger, state of the art facility at 3000 Eastpark Boulevard in Cranbury, New Jersey. With the new facility nearly four times the size of Quantex Laboratories' previous site, the company has added microbiological testing capabilities to its contract laboratory and analytical testing CRO services.

"The new facility enables us to offer our clients a broader range of services," said Dr. James Menoutis, President and CEO of Quantex. "We've also upgraded our instrumentation, which is fully compliant with cGMP and GLP regulations."

Menoutis noted that the planned expansion was moved forward after the company's previous location sustained significant damage from Hurricane Sandy. Quantex is located in space previously leased by Ligand Pharmaceuticals, which relocated its operations to California last year.

"Our relocation to a New Jersey facility is an indication of our belief in the state's biotech and commercial strength," said Menoutis. "It's also a testament to the support provided by the New Jersey Business Action Center both during and after the storm."

"The Christie Administration's commitment to innovation and discovery is strong," said Lt. Governor Kim Guadagno. "We're proud to have companies like Quantex Laboratories expand their operations here in the Garden State, further enhancing New Jersey's tradition as a leader in life sciences."

“One of the factors in our consideration to remain in New Jersey was the ability to hire skilled laboratory professionals,” said Menoutis. “We believe that our presence helps retain and grow the science and research communities in the state.”

Quantex Laboratories provides a comprehensive range of cGMP and GLP contract analytical and research services. The company serves a diverse range of clients in North America, South America, Europe, the Mid-East and Asia, including Fortune 500 global pharmaceutical, personal care products and cosmetics companies, as well as virtual and mid-sized companies.
