

AN APP FOR

Built in the new SharePoint® 2013 app model, TeamWorkPath is a document workflow application that easily generates workflows based on your organization's drafting and approving processes.

The TeamWorkPath workflow generator provides better administrative controls enabling users to easily assign documents and teammates based on the document type. Whether you are a business process owner or a technical decision maker, you'll appreciate the ease and flexibility TeamWorkPath has to meet your business needs.

The screenshot displays the TeamWorkPath application interface within a SharePoint environment. At the top, a progress bar shows the workflow stages: Home, Start, Assign, Draft (current stage), Review, Closeout, and Closed. Below the progress bar, document details are shown: NAME: Operating Agreement, TYPE: Correspondence, DUE: 10/30/2013, START DATE: 10/18/2013, ID: 019-2013-GS, and TEAM MEMBERS: 2. The interface is divided into several sections: DOCUMENTS (showing a draft document 'FinalDraftDoc.docx'), TEAM (listing roles like OWNER Ana Sanchez and REVIEWER Jon Cooper), and ACTIVITY (showing a list of recent actions like 'Uploaded Document' and 'Submitted for Draft Step').

Ideal for Managing:

Directives	Proposals
Policy Documents	Press Releases
Contracts/Agreements	Memorandums

Key Benefits:

- Improve team performance with routine procedures that are now automated
- Eliminate duplicative effort realized when relying on email to route attachments
- Quickly track the volume and status of documents
- Improve collaboration among employees and functional teams
- Reduce strain on email and paper files

Expand your extensibility capability

Implement your existing document approval processes into a paperless workflow. TeamWorkPath, by Applied Information Sciences (AIS), allows you to easily add new workflows so you can effectively manage the people and documents required for successful routing and approving.

Leverage apps and make them business-changing events

Identify applications that will bring value to the work you do. TeamWorkPath eliminates time-consuming activities associated with antiquated methods.

Reduce your costs by using the SharePoint® app model

TeamWorkPath is a best-in-class app that delivers process automation and enables lower cost to own and lower cost to maintain. Capitalizing on the extensibility and security of the SharePoint® 2013 app model, TeamWorkPath is a cost effective way to field highly adaptable workflows that rival more expensive ERP systems.

Don't change your process! Adapt this application to reflect your current document review process.

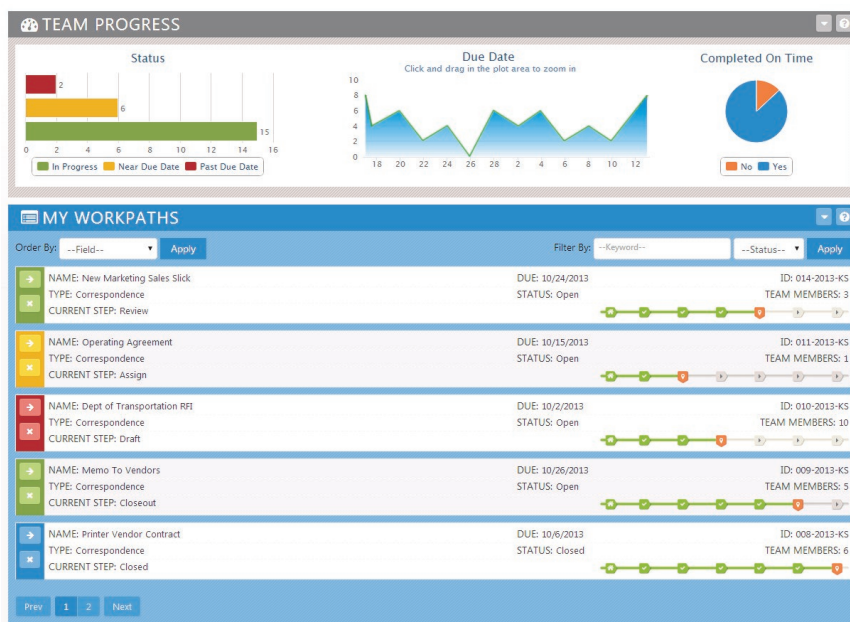

Product Features:

TeamWorkPath is available in both Pro and Enterprise editions. TeamWorkPath Enterprise edition allows users to generate an unlimited number of adaptable workflows built on the application's dynamic engine.

	PROFESSIONAL	ENTERPRISE

Office® 365 deployment	✓	✓
On premise deployment	✓	✓
Customize workflow steps		✓
Workflow builder to extend/modify		✓
XAML import process/unlimited new workflows		✓
Email notifications and alert events		✓
Price	\$499	Contact for pricing

A Truly Automated Document Solution:

- Select and upload your document, and select the people responsible for contributing and approving
- Track status and volume using charts and team dashboards
- Set dates that are relevant to the workflow
- Edit drafts and allow concurrent users by leveraging Office® features
- Reduce document processing time through automation

Enterprise Edition is Extensible:

The workflow generator easily produces any number of workflows based on the specific needs of each team and each document.

The screenshot shows the 'WORKFLOW TYPE DETAILS' form. It includes fields for 'Workflow Type Name' (Correspondence), 'Reminder before days' (2), and 'Reminder after days' (3). Below these is a table for 'Associated Workflow Steps' with columns for 'Associated Workflow Step Title', 'Workflow Step', 'Min # Participants', 'Max # Participants', and 'Action'. The table lists steps like Assign, Draft, Review, and Closeout. At the bottom, there is a 'FIELDS' section with a table for 'Control Id', 'Control Name', 'Data Type', 'Control Type', 'Required?', and 'Action'. The table lists controls like CODETRNField, CODETGSField, and CODETACHField.

- Isolate and protect each document's permissions and assignments
- Configurable alerts and notifications
- Incorporate new and custom XAML based workflows
