

MedicsDocAssistant EHR for Behavioral Health: Making EHR Sense for your Addiction Disorders Practice

The MedicsDocAssistant EHR for Behavioral Health (BH) is extraordinarily well designed with numerous features and capabilities for Addiction Disorder / Substance Abuse practices of every size and scope.

The system is *specifically designed* with templates for Psychiatric Evaluation, Intake, Medical Assessment, and more. Outpatient, inpatient, partial hospitalization, Therapeutic Learning Centers and Detoxification settings are all supported by MedicsDocAssistant EHR for BH.

MedicsDocAssistant for BH integrates behavioral healthcare and medical services, resulting in an outstanding **Continuity of Care** capability.

A partial listing of the system's BH-specific capabilities includes:

ICD-DSM Coding	Medication Management	Social Activities
Treatment Plans	Multiple Visit Type Options	Clinical Justification
Substance Abuse	Session Notes with Psychiatric Medication Check	Mental Status Exam
Outcomes Measure		Documenting Goals
Current Behavior	Patient Support Systems	CBE, Child CBE, CBR
Psychological Trauma	Violence Risk Factors	Documenting Intervention
Sadness Scales	Suicide Risk Factors	Transfer / Discharge Options

Patient Program window displays all milestones attached to the patient.

The **Documentation Type** allows the user to easily select documents such as Intake, Treatment Plan, Progress Plan, and more.

User-defined **Reminders** can be sent to specific patients and / or system users, or providers for any number of Reminder reasons.

Outcome Measures is a powerful management tool in determining an overall view of the patient's or client's condition, from admission to discharge. Medication compliance, 12-Step Involvement, relapse prevention are included in Outcome Measures.

MedicsDocAssistant's **Diagnostic and Statistical Management (DSM)** includes extensive information on Axis-I to Axis-V diagnoses. Axis-V contains the patient's GAF score.

The **Mental Status Exam (MSE)** is comprised of sections on the patient's psychiatric history, appearance, memory, mood, concentration, sleep, appetite, thought form, sensory / cognitive orientation, etc., helping to create the patient's "Psychiatric Formulation."

Medical Assessment compiles information on the patient's medical history and current status helping to arrive at the treatment plan.

The **Comprehensive Intake Assessment** is a multi-dimensional assessment instrument based upon Integral Psychology.

Secure **Intra-Office messaging** between providers and staff.

Behavioral Health-related **Reports** available.

Appointment Scheduler identifies appointment types such as Depression, Group Therapy, Individual Therapy, Psychiatric Evaluation, Initial Assessment and more, including user-defined appointment types.

The system's **Letters** capability provides for customizable referring provider and patient letters.

"If applicable to your practice, **MedicsRx** is available for true electronic transmission of prescriptions to the patient's pharmacy, and will track medications prescribed, dosages, refills, interactions, allergy, and more.

MedicsDocAssistant for Behavioral Health is available in **Customer Hosted or ASP / Cloud format**, depending on the practice's preference.

As an option, when combined with **MedicsPremier™** for wide-ranging Behavioral Health practice management and EDI, a comprehensive single, unified Suite is created managing the clinical and business sides of the practice.
