**Job Kits**

Job Kits (canned jobs) are a quick and easy way to place a repair onto a ticket that will give a great appearance to the customer and save time from having to write up the same job over and over.

**Job Kits - Edit/View**  
 Use this screen both to construct a job kit for later use on a service order and to use an existing kit on a service order. A kit can be put together in the same way a service order is billed out. Use the space bar to select which lines should go onto the service order.

**Job Kit: Brake Service** Control #20329

**\$197.50 Billed time: 6.90 Actual Time: .00**

Our job kits can have many options. As you see in the above example, we are using our brake service kit. We see several options we can choose from. We can even have a trigger that will take us directly to Activant to find our parts and any additional labor.

There are two ways to create a job kit.

Create a kit from within a ticket with just a couple clicks of the mouse. If you write up a job and want to turn it into a job kit, right click the total line, choose create a kit, name it and save it.

Create a kit by scratch by clicking on Add and placing in the text and options you would like in your new kit.
