

## **PerspecSys Selected as SINET 16 Innovator to Present at 2013 SINET Showcase**

San Francisco, Calif., Dreamforce 2013, November 20, 2013 – [PerspecSys Inc.](#), the leader in cloud data control solutions for the enterprise, today announced that it has been selected as a [SINET 16 Innovator](#). PerspecSys will present its AppProtex Cloud Data Protection Gateway during the [SINET Showcase 2013](#) to be held December 4-5, 2013 at the National Press Club in Washington D.C. The Security Innovation Network™ (SINET) is organization focused on advancing Cybersecurity innovation through public-private collaboration.

The SINET Showcase program, supported by the Department of Homeland Security Science & Technology Directorate, received one hundred and fifteen application submissions from technology companies. These entries were carefully vetted in a two-stage process by the [SINET Showcase Steering Committee](#) comprised of 66 leaders from the government, industry, investment and academic communities. The SINET Showcase, a public private partnership initiative, was created to identify and share innovative and potentially disruptive Cybersecurity technologies among the audience of buyers and influencers from the investment, research, commercial, civilian, defense and intelligence communities.

The AppProtex Cloud Data Control Gateway was recognized for its unique ability to provide enterprises and public-sector organizations with total control over their sensitive data, enabling a safe, secure and compliant migration to the cloud, regardless of where their cloud service provider is located. PerspecSys has the only solution that preserves cloud application functionality – even when the data is tokenized or strongly encrypted – using encryption such as National Institute of Standards and Technology (NIST) listed FIPS 140-2 compliant modules. This allows end-users to keep full application functionality, such as the ability to search and sort data, send emails, and generate reports, while the enterprise ensures its data is secure and it remains compliant.

“We are honored to be recognized as a SINET 16 Innovator for our achievements in enabling enterprises and government agencies to adopt the public cloud,” said David

Canellos, CEO of PerspecSys. “Our AppProtex Gateway gives these organizations the ability to fully control their public cloud use – discovering how data is being shared with cloud environments, analyzing what it means to their corporate risk exposure, and then taking steps to protect their most sensitive data before it leaves their control. We’re honored to be selected as a SINET 16 Innovator and look forward to participating in the SINET Showcase next month.”

“The traditional corporate debate of ‘build versus buy’ is no longer a debate. It’s a buy market being driven by a dynamic attack environment. As a result, the importance of accelerating innovation is imperative, not only for the entrepreneur, but also for a higher calling – the national security and economic interests of our country,” said, Robert Rodriguez, Chairman and Founder of SINET. “We congratulate the SINET 16 for helping shape, influence and impacting the future of the Cybersecurity domain.”

#### **About PerspecSys**

PerspecSys Inc. is a leading provider of cloud data control solutions that enable mission-critical cloud applications to be adopted throughout the enterprise. PerspecSys gives organizations the ability to understand how employees are using cloud applications and then take the steps necessary to protect sensitive information before it leaves the enterprise’s network. By removing the technical, legal and financial risks of placing sensitive data in the cloud, PerspecSys make the public cloud private. Based in Toronto, PerspecSys Inc. is a privately held company backed by investors that include Intel Capital, Paladin Capital and Ascent Venture Partners. For more information please visit [www.perspecsys.com](http://www.perspecsys.com) or follow us on Twitter @perspecsys.

#### **About the Security Innovation Network™**

SINET is a community builder and a strategic advisor whose mission is to advance innovation and enable global collaboration between the public and private sectors to defeat Cybersecurity threats. It’s public-private partnership events are supported by the U.S. Department of Homeland Security, Science & Technology Directorate. SINET also offers Advisory Services and a Membership Program that have helped build thousands of relationships and delivered value across a broad spectrum of the security community to include builders, buyers, researchers, and investors.
