

# Intelligent InSites Integration with RF Code

Intelligent InSites has integrated RF Code's active RFID readers and active RFID asset, sensor, and patient/staff tags into their comprehensive set of enterprise RFID and RTLS solutions for healthcare. This integration enables Intelligent InSites to fully leverage RF Code's real-time location and condition information in healthcare environments.

## Intelligent InSites Overview

Intelligent InSites helps healthcare organizations reduce costs and improve care by transforming automatically-collected data into actionable insights. Through its interoperable, hardware-agnostic, healthcare RTLS software platform, Intelligent InSites gathers data from real-time location, condition sensing, and other systems; then delivers meaningful information to the right person, at the right time, on the right device.

Intelligent InSites approach goes beyond traditional RFID and Real-Time Location Systems – the InSites RTLS+ solution approach combines enterprise-class, hardware-agnostic RTLS software with proven methodologies for implementation, process improvement, and measurable performance outcomes—across individual hospitals and multi-hospital healthcare systems.

## Integration Details

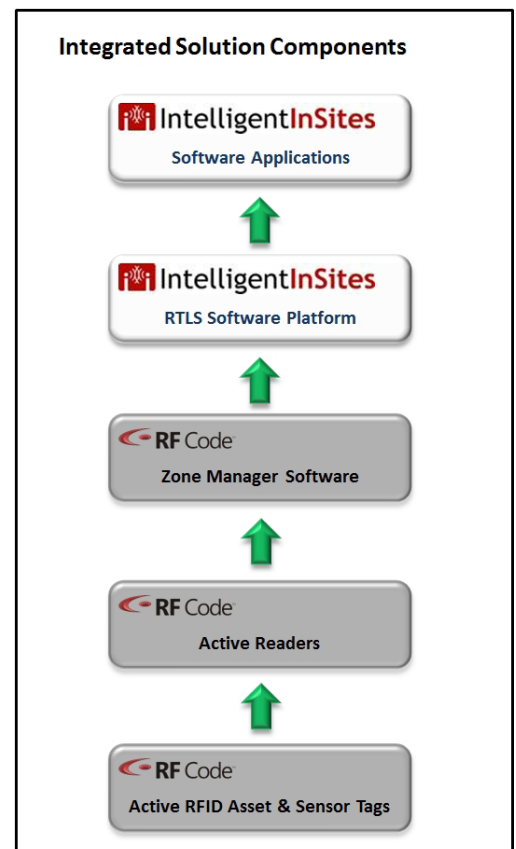

The Intelligent InSites RTLS software platform communicates directly to RF Code's active RFID readers to gather real-time location and condition data; then through a sophisticated workflow engine enables the intelligent automation of healthcare systems and processes.

The entire set of InSites RTLS solutions leverage the RF Code integration enabling healthcare providers to gain access to the real-time view of what is happening across all departments. With this real-time information, hospitals are able to deliver better patient care, reduce costs, increase revenues, and improve patient and employee satisfaction.

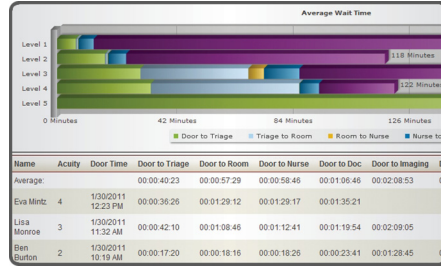

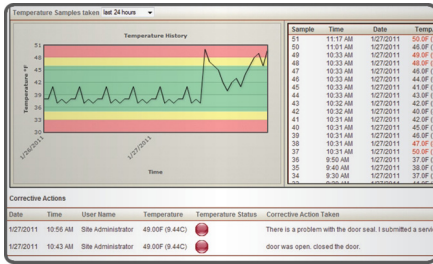

The modular nature of the Intelligent InSites solution enables healthcare organizations to implement the RTLS solution in a deliberate and thoughtful manner. As the needs of the organization change, or as customers are ready to tackle the next area of process improvement, Intelligent InSites applications can be easily and affordably added to leverage their RTLS/RFID investment and to provide additional value.

Here are just a few InSites applications which utilize real-time location and condition data derived from RF Code's active RFID technology:

- InSites Asset Management – a solution to right-size equipment inventory, increase asset utilization, streamline maintenance, and reduce purchases and rentals
- InSites Patient Flow – a solution to monitor, manage, and optimize patient progress through all stages of care delivery
- InSites Temperature Monitoring – a solution to automate temperature readings, improve regulatory compliance, and improve patient safety
- InSites Mobility – a solution to improve interdepartmental communication and increase patient satisfaction and staff satisfaction
