NATA Compliance introduces... **SkyGuard**

Implementation of the Transportation Security Act (TSA) and associated government security regulations raises a number of questions that need to be considered by all businesses/agencies involved in the transportation industry. Does the proposed system comply with current TSA security requirements? Will it accommodate anticipated future regulations? All things considered, is it cost-effective? For example, how (and at what cost) will your security system incorporate expected Transportation Worker Identification Card (TWIC) requirements?

With TSA regulations in a state of flux and new regulations in review, it is essential that your security system deliver the currently required levels of security and include the flexibility necessary to accommodate evolving security requirements.
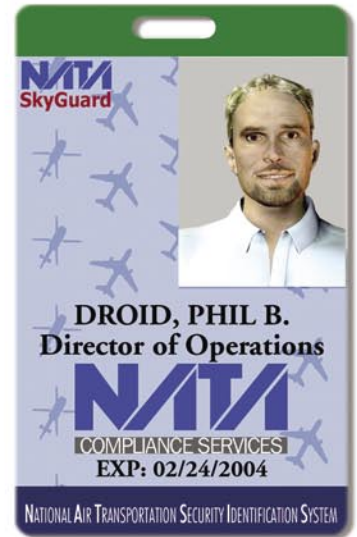

NATA Compliance Services has combined their knowledge of the transportation industry with leading-edge fingerprint biometrics to develop **SkyGuard**, a badging process designed specifically for security applications. The system includes multiple identification parameters, smartcard technology, and image processing fingerprint algorithms.

The smartcard enables you to record employee information, photos and fingerprints on the card. You can choose the expiration date and be confident that any person whose badge has expired will no longer be granted access to your system. The card will only be issued when you are satisfied that the candidate has satisfied all FAA/DOT/TSA required regulations. And it has been designed to seamlessly integrate with time and attendance systems and video surveillance systems.

To ensure that you receive the highest levels of security and access control, confirmed data in the smartcard requires, at a minimum, an identity check and a driver's license check. Thus, security compliance is constantly updated to guard against evolving threats to security. The **SkyGuard Badging** system also allows you to control access individually by denying access to any individual at any time by simply changing the individual's profile in the computer. It's that easy!

The strategic alliance of **SkyGuard Badging** and NATA Compliance Services combines leading edge identification technology with transportation regulatory expertise to deliver a one-stop solution capable of addressing both current and future security requirements. The flexibility of the system is your insurance that today's security solution can seamlessly incorporate tomorrow's technology.
