Registration, Evaluation, Authorization and Restriction of Chemicals

Re: REACH / EU Regulation No. 1907 / 2006

It is iCONN Systems policy to avoid the use of hazardous materials in our processes and products as much as possible, and to continuously improve our manufacturing methods. One of the fundamental principles of this policy is to provide the necessary level of protection for human health and the environment.

We recognize the importance of the REACH (Registration, Evaluation, Authorization and restriction of Chemicals) regulation which entered into force June 1, 2007. This regulation imposes requirements and restrictions on chemicals used in all aspects of production. iCONN is working with our supply chain and their efforts to restrict or eliminate substances flagged by REACH.

SVHC's (Substances of Very High Concern) are continually being updated by REACH and iCONN is dedicated to continuous product improvement as it pertains to the evolution of REACH.
