More Productive, More Profitable, More Sustainable

From operational complexity to fluctuating commodity prices to a lack of available skilled personnel, today's oil and gas producer faces new challenges in the quest to be more productive, more profitable and more sustainable. These challenges require new tools and new ideas to overcome them.

At Zedi, we've encountered a wide spectrum in production operations in our 60 years of business. We are continually looking to the future while drawing on our past to come up with the right solutions to meet our customers' needs. As a leading oil and gas technology and services company, we have the knowledge, expertise, and talent to help our customers realize their production potential, backed by our commitment to simplicity, reliability, and accuracy.

Data Management

Power your decisions with cloud-based data services.

When you want to know what's going on in your organization, you need to follow the data. With our data management solutions – Zedi Access, Zedi Vital, Roughneck, and Zedi TrueChart – you can remotely access important data about your business.

Zedi Access is a cloud-based production data management platform that provides a clear, consolidated, online view of what's happening in the field. This powerful tool provides easy access to production and operations data, real-time visibility of the field, and remote control of well site functions in a single source, regardless of the field instrument used at site.

Take control of your field with complete data solutions that provide accurate and reliable answers you need to make the best decisions for your operations. Relieve the strain on your IT department by outsourcing data infrastructure to our secure cloud infrastructure custom built for oil and gas producers.

Artificial Lift

Get the most out of your reserves with the next generation of lift solutions.

Quickly equip oil and liquids rich gas wells in a matter of hours with a cost-effective alternative to conventional pump jacks. Realize the same advantages of traditional lift mechanisms with a more streamlined design, smaller lease footprint, and optimization capabilities of the Zedi SilverJack. Also reduce landowner and compliance issues with direct wellhead connection, a fully contained internal stuffing box, and an automatic safety shutdown that eliminates costly leakage.

We've taken our core principles of remote access and data integrity, and applied them to the area of artificial lift. Zedi Access offers the flexibility of remote visibility and control, allowing you to operate your controller, monitor surface cards, and receive surface alarms without visiting the well site.

Whether its boots on the ground or trusted advisors in the office, we have service expertise to help you realize your production potential. Put our team of experts to work for you.

Field Instrumentation

Our innovative devices are at the wellhead so you don't have to be.

Whether you need remote monitoring, remote control, measurement or testing, we have a full range of field instruments to equip your wells. From our Smart-Alek EFM device to Zedi SCADA to our eTube flowmeter to our unique Zedi Oil Well Test, we have the right mix for your particular needs.

Working with our team of in-house engineers, we can design and implement a custom engineered solution that will provide you with two-way control over numerous well site processes. Put your field at your fingertips from anywhere in the world, with our unique ability to find the right solution for you.

Consulting Services

Use our expertise to unlock your production potential.

Our team of experts focus on ensuring proper measurement, understanding complicated production accounting matters, and meeting regulatory compliance. Utilizing our expertise and proven methodologies, we'll take a strategic and comprehensive look at your production operations and help you manage risks and get your fair share of production revenues while boosting your bottom line.

Our consultants have 10 to 30 years of experience as specialists in the fields of measurement, automation, instrumentation, and production and revenue accounting. They stay ahead of regulatory changes, such as EPAP, and apply API and AGA industry standards to measurement best practices.

Field Services

Put decades of diverse field experience to work for you.

From remote sites, to field offices, and everywhere in between, we've got the experts you need in the field. Take advantage of decades of experience and intimate knowledge of local challenges in production operations and maintenance. Ease your staffing concerns by trusting our operations and measurement teams to provide safe and reliable practices and ensure your field is operating at its best.

We ensure quality outcomes by applying rigid standards to proven methods, using current and fully inspected equipment, and fully training our safety-certified operations staff.

Building Strong Relationships

We are focused on high quality service delivery and exceeding customers' expectations by providing support in the field and in the office. With 24/7 call center support and service, a team of experienced field technicians, and virtual operators monitoring your field with the Zedi Control Center, our team builds a relationship with you by discovering how our systems can best integrate with yours. We pride ourselves on our simple and reliable service to ensure you have access to what you need, when you need it.
