Tackling the Challenges of the Oil and Gas Industry

We operate in an industry that faces challenges as fluid and dynamic as the substances that define it. From operational complexity to fluctuating commodity prices to the lack of available skilled personnel, today's producer faces conditions unlike those of previous generations and needs new tools and new ideas to overcome them.

At Zedi, we address these challenges head-on. In 60 years of business, we've encountered a wide spectrum of production operations, and we are continually looking to the future while drawing on our past to come up with the right solutions to meet your needs. As a leading oil and gas technology and services company in the field of production operations, we have the knowledge, expertise, and talent to help our customers realize their production potential, all backed by our commitment to simplicity, reliability, and accuracy.

Artificial Lift

Accelerated production. Optimized performance. Wellhead intelligence. Get the most out of your reserves with our artificial lift solution that makes well optimization simple. Discover a cost-effective alternative to conventional pump jacks that you can equip on your oil wells (and liquids rich gas wells) in a matter of hours. Quickly realize the same advantages of traditional lift mechanisms with a more streamlined design, smaller lease footprint, and full automation capabilities of the Zedi SilverJack. You'll also reduce landowner and compliance issues with direct wellhead connection, a fully contained stuffing box, and an automatic safety shutdown that eliminates costly leakage.

We've taken our core principles of remote access and data integrity, and applied them to the area of artificial lift. The flexibility offered by remote visibility and control lets you operate your controller, monitor surface cards, and receive surface alarms without visiting the well site, helping you increase production while freeing up operator time.

Data Management

When you want to know what's going on in your organization, you need to follow the data. With Zedi's production data solutions, you'll have the information you need delivered to one place before you even have to look for it, regardless of the field instrument used to collect it.

With our data management solutions – Zedi Access, Zedi Vital, Zedi TrueChart, and Roughneck – you can remotely access important data about your business from production data to operations data. With Zedi Access and Zedi Vital you can centralize all of your production data in a single secure platform. With advanced reporting functionality, alarms and trending capabilities, you can make quicker decisions about your production reducing downtime and operational costs. Our chart processing service, Zedi TrueChart, offers the most accurate and complete interpretation of chart data available. Using our unique image analysis software you can gain faster, easier access to your data on Zedi Access. Finally, streamline the management of your assets and preventative maintenance schedules with Roughneck's online platform, reducing missing inventory and proactively maintaining equipment.

Take control of your field with complete data solutions that provide accurate and reliable answers you need to make the best decisions for your operations. Relieve the strain on your IT department by outsourcing data infrastructure to our secure cloud infrastructure custom built for oil and gas producers.

Zedi's 60 years of diverse experience helps you gain perspective on your operation. Whether its boots on the ground or trusted advisors in the office, we have service expertise on hand to help you realize your full production potential. Put our team of experts to work for you.

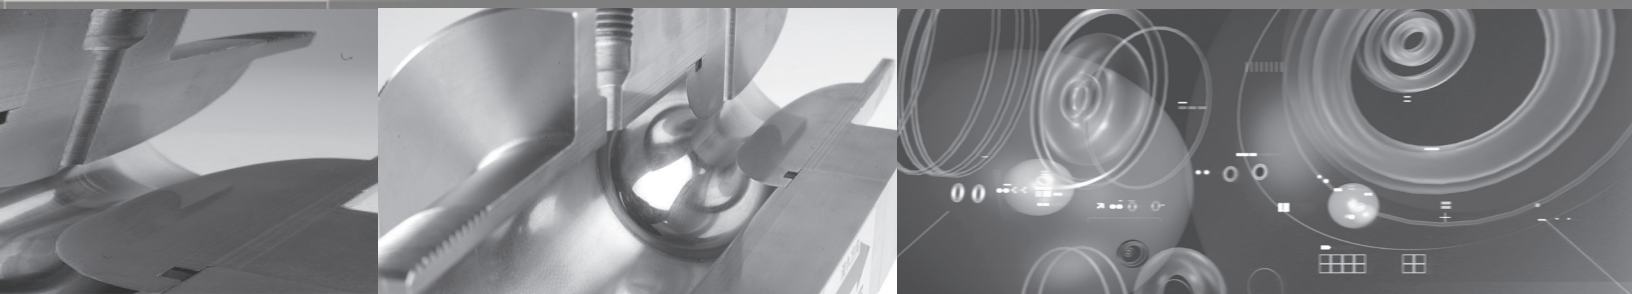

Field Services

Take advantage of decades of experience with intimate knowledge of local challenges in measurement operations, contract operations, measurement system maintenance, and hydrocarbon analysis. From remote sites, to offshore platforms, to everywhere in between, we've got the experts you need in the field. With our qualified team of experienced personnel, we can help manage your remote production operations sites.

Since quality measurement is at the heart of every decision you make in production operations, it is essential that you work with a team that puts data integrity first. Measurement inaccuracies can be costly so we ensure quality outcomes by applying rigid standards to proven methods, using current and fully inspected equipment, and fully training our safety-certified operations staff.

Consulting Services

Being off with oil and gas measurement by even 0.5% can have a huge impact on profitability for producers. Proper measurement is complicated and requires understanding of where the risks are and what tools and processes help mitigate risks at a reasonable cost. It is important to have the expertise and knowledge to deal with process design and development, creation of schematics, field validation and auditing, proper compliance, and training. We have the focus, knowledge, and expertise to help your organization overcome challenges in the areas of measurement consulting, regulatory compliance, and production accounting.

Field Instrumentation

Whether you need gas measurement, testing, remote monitoring, or remote control, our innovative devices are at the wellhead so you don't have to be. With a full range of inventoried field parts for both primary and secondary measurement devices, we can quickly and easily meet your equipment needs. We can equip your gas field with instrumentation options including Electronic Flow Measurement, SCADA, and charts. Working with our team of in-house engineers, we can create a custom engineered solution that will provide you with two-way control over numerous well site processes.

Our instruments collect timely and accurate data directly from the field, delivering them to Zedi Access, a single source, oil and gas cloud-based production platform that keeps you informed about your operations. Regardless of the measurement device, Zedi Access puts your field at your fingertips anytime anywhere so you can interface with your equipment, monitor and control sites, and best manage your day and your production.

Building Strong Relationships

Our approach is focused on delivering and exceeding our customers' expectations by providing support in the field and in the office. With 24/7 call center support and service, a team of experienced field technicians, and virtual operators monitoring your field in the Zedi Control Center, our team looks to build our relationship with you by discovering how our systems can best integrate with yours. We pride ourselves on our simple and reliable service to ensure you have access to what you need, when you need it.
