

MODERNIZING YOUR INFRASTRUCTURE

WINDOWS SERVER 2003 END OF LIFE – JULY 14, 2015

With the end-of-support date for Windows Server 2003 fast approaching, there has never been a better time - or easier way - to plan your data center transformation. Relying on Windows Server 2003 after its end-of-life date is a disaster waiting to happen.

WINDOWS SERVER 2003 RISKS

NO UPDATES:

37 critical updates were released for Windows Server 2003 in 2013. Without updates your company will be exposed to an increased risk of attacks and cybersecurity danger.

NO COMPLIANCE:

Win Server 2003/R2 will not pass a compliance audit and will encounter problems with software and hardware. Lack of PCI compliance can put your credit card transactions at risk.

NO SAFE HAVEN:

This impacts physical, virtualized servers and small business Windows Server 2003.

THIS IS ONE OF THE MOST PREVENTABLE SECURITY ISSUES OF 2015 – DON'T DELAY!

Transform your current Windows Server 2003 workloads by migrating, upgrading or modernizing to Microsoft Azure, Windows Server 2012 or SQL 2012. SADA Systems is offering a FREE assessment of your current server infrastructure. IT solution experts will work with you to develop a road map addressing the risks of Windows 2003 EOL and will help you transition workloads to a modernized infrastructure platform (Windows Server 2012 and Microsoft Azure).

INFRASTRUCTURE ASSESSMENT FREE * (2 – 4 DAYS)

A FEW OF OUR CLIENTS

TRUE RELIGION

BCBGMAXAZRIA

“

SADA did a great job helping us with technical challenges we had during our Office 365 implementation. They played a central role in the success of the project.

”

KENT FULLER,
Director of Enterprise
Infrastructure Services
at BCBG
