

# METAL ROOFING IS GREEN

Metal is one of the world's most recyclable materials and can be renewed and reformed generation after generation. Metal substrates are often recycled, always recyclable — and, because of their constant manufacturing stream, use and reuse, they are good for our environment and our economy.

## Recyclable

Fabral products are produced using primarily metal substrates that are substantially recycled and completely recyclable. Every ton of steel that is recycled from Fabral roofs saves 2500 pounds of iron ore, 1400 pounds of coal & 120 pounds of limestone. Metal roofs also offer over twice the life span of an asphalt roof - saving valuable land fill space.

## Reflective Qualities

Fabral has attained Energy Star approval for many panel profiles that we manufacture — available in multiple substrates and a variety of Enduracote™ paint system colors.

Energy Star approved roof systems allow buildings to stay cooler and, in turn, use less electricity for air conditioning; which means a reduction in power generation and a reduction of pollutants.

## Solar Integration

Fabral's Solar SSR™ system can be integrated with a variety of metal panels and offers a return of investment of 10 years or less. When it comes to generating electricity, Solar SSR offers the highest relative efficiency under high temperature and low light conditions and is up to 30% more efficient than other systems.
