

# Intelligent content migration

Users in control of migration = better content + lower costs

## ■ Evolving ECM landscape

ECM business needs are changing and new technologies and systems arise to support them. Consolidations and implementations continue to be an important part of the IT calendar of every organisation. The success and acceptance of an implementation however, is highly dependent on the quality of the content after migration. Xillio migrations provide better collaboration, higher productivity and improved findability in your new ECM platform.

## ■ Why not take control?

So why not make sure your complex migration becomes easy, automated, adds value to your content and stays within your control?

**Migrate** and enrich your content

## 'Would you like to save migration costs and improve the quality and success of your ECM implementation?'

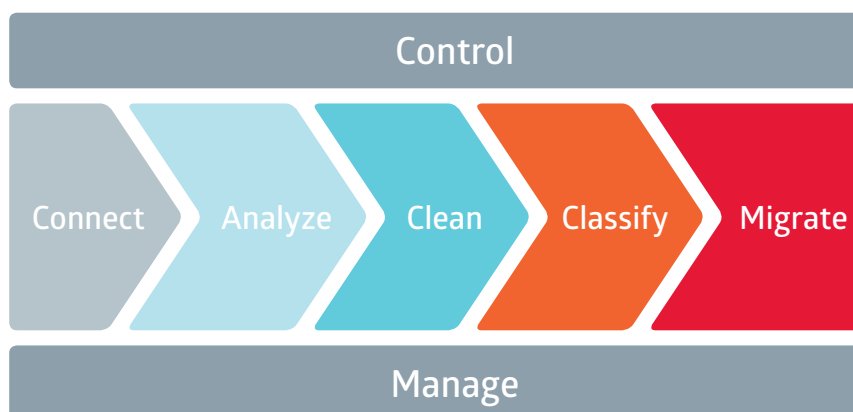

### Your situation

- Are you responsible for a new ECM implementation where migration of legacy systems is necessary?
- Is your company moving towards SharePoint and needs to migrate the valuable content from network drives?
- Is your enterprise reorganizing their content landscape by centralizing different content systems?
- Are you consolidating multiple systems due to a merger or acquisition?
- Are you switching to a new technology to support your Enterprise Content Management?

### Our solution

- Out of the box connectors to all major ECM platforms.
- You are in control of migration, cleaning and classification, resulting in better content and significantly lower project costs.
- Intelligent deduplication and classification based on natural language processing and statistical analysis.
- Allows distribution of migration tasks to different roles within the organization.
- Learns by example, using an intelligent learning mechanism to identify document types through the use of training sets.
- No lift and shift, adding value to the content at moment of migration, resulting in a qualitative successful migration and ECM implementation.
- No business interruptions, no content freezes required.
- Visual mapping of content from source to target system supported.

### Proven approach

Migrations are iterative processes, which are fully supported by the flexible solution. After connecting to the source(s), the content is analyzed to get insights in cleaning and migration strategies. In the classification phase several intelligent techniques will classify and enrich the content. In the last phase the actual migration is executed.

Xillio is a leading software provider of content solutions. With more than ten years of experience and research & development in analyzing, classifying, enriching, migrating and controlling content, we can say we know content. This knowledge and experience is part of our innovative standardized software solutions, used by our clients like Philips, Canon, Aegon, Metlife, DSM, ABN Amro, Kohl's to solve their content challenges. With this, our clients have achieved large costs savings, increased employee productivity and were able to get in full control of their migrations. Xillio is based in the Netherlands, United States and Canada, for more information see [www.xillio.com](http://www.xillio.com)
