

# GPS Countertop Plastic™

TECHNICAL DATA SHEET

## Product Description

Countertop Plastic™ is a 3 mil Blue self-adhesive Polyethylene film with an adhesive system our engineers made for use on countertop types of surfaces.

This film adheres to the surface, gaining strength from the surface being protected. This state of the art water-based adhesive system works extremely well on Granite, Tile, Corian®, Zodiac®, Marble, Quartz, Soapstone, Compac Marmol & Quartz, Glass, Concrete, Formica®, Swanstone, Caesarstone, Wilsonart Earthstone, Gibraltar & Laminates, and many other Acrylic and Resin countertop surfaces.

This is very inexpensive insurance for countertop scratch protection. Countertop Plastic™ should be used during fabrication, shipping, delivery, installation, and after installation to keep the countertops looking like new until all work in the area is completed.

## Easy and inexpensive protection

- ✓ Scratch protection for all types of countertops
- ✓ Blue tinted film, 3 mil thickness
- ✓ State-of-the-art adhesive system
- ✓ Easily installed and removed
- ✓ Your customers will appreciate the protection
