

Marble Waiver

Marble surfaces are more susceptible to staining by many common liquids such as mustard, oil, vinegar, citrus juice, toothpaste, mouth wash, hairspray, etc.

Any acidic substance that may come in contact with your marble countertops will cause a chemical reaction that will etch and remove the polish of the marble.

- Marble is a natural product that is more porous than granite and therefore, more susceptible to staining and chipping
- Marble is a soft material which will easily scratch
- Marble comes with surface scratches and fissures (a form of crack that has no stone content and is usually filled with clear resin)
- Marble has extrusions (small visual cracks that are not faults in the marble slab)
- Marble has marks of efflorescence (appears as a white powdery residue on the surface of the stone)
- Marble can come with shade, veining, and pattern variances from one end of the slab to the other
- Marble loses shine with wear
- Marble requires frequent applications of sealant
- Seams in marble countertops are visible and felt when you run your hand along it
- Seam locations are at the sole discretion of the fabricator unless specified in writing before production (change in seam location may necessitate the quote to be revised)
- Marble is not recommended for use in kitchens

* LATITUDE will not be held responsible for misuse or damage caused by customer negligence.

* I have read and understood the above notations that may occur in my marble countertop.
