Earthwave Technologies Releases Fleetwatcher 3.4

(INDIANAPOLIS) Earthwave Technologies has released the newest version of Fleetwatcher, a unique and advanced telematics solution geared to the construction industry. Fleetwatcher 3.4, which comes on the heels of the release of Fleetwatcher 3.2 in January, provides customers with additional features, reports, and alerts, while also enhancing some of the existing functionality of the product.

Some of the added features include a new manual entry of hour meter, a low battery alert, an ignition on alert, and an enhanced idle alert. Customers will also be able to access new and enhanced reports, including a new alert report and idle summary report.

“Fleetwatcher 3.4 is more comprehensive than any previous version of Fleetwatcher product because it was built around what our customers told us they needed,” said Larry Baker, president of Earthwave Technologies. “As always, we are open to their suggestions and feedback and will continue to further enhance the product so that it meets their changing requirements.”

About Fleetwatcher

Fleetwatcher uses a device contractors attach to their vehicles that collects and transmits usage data through a GSM wireless data network to Earthwave’s Internet-based application. The Fleetwatcher application provides the contractor with an easy-to-use, online software reporting interface that allows them to view and manage all of the data collected from their equipment. Earthwave Technologies’ proprietary hardware and software collects data on location/tracking, , frequency of equipment use, amount of time spent working, amount of time spent idling, and engine starts. Contractors use the information to determine job progress, labor hours accounting, equipment productivity, preventative maintenance needs, and misappropriation of machinery.

About Earthwave Technologies

Earthwave Technologies, based in Indianapolis, Ind., works directly with construction company owners/operators to help them manage and maintain their fleet of construction vehicles while at the same time improving their business practices and operations efficiency. Earthwave's Fleetwatcher system utilizes telematics to wirelessly track and report data pertaining to machine use, productivity, idle time, location and maintenance for its customers. More information is available at the company's website at www.earthwavetech.com
