

TANK MOUNTED AIR COMPRESSORS

SERIES: ERC, AC, OPTIMA 11

FEATURING 90 GALLON AIR RECEIVER TANKS

MATTEI® continues to deliver superior performance and more value for your money with select compressor packages mounted onto 90 gallon air receiver tanks. Preferred for their exceptional durability, compact size, quiet reliable operation, and long-life low maintenance design.

UNCONVENTIONALLY RELIABLE, DURABLE AND ENERGY EFFICIENT

Mattei's advancements in technology and materials offers our customers the best value in premium quality air compressors found anywhere on the planet. Our unconventional "bearingless" air-ends last up to 100,000 hours and are warranted for a full 10 years as they last up to 2-3 times longer than conventional rotary screw type machines. Super quiet operation, less lubricant, and energy-efficient designs save you more.

WHY MATTEI IS YOUR BEST CHOICE

Mattei compressors are designed to give constant top performance 24 hours a day, every day of the year. It is not unusual for these compressors to have an operating life of over 100,000 hours. Our 90 gallon tanks give you more than 10% extra energy saving air storage than common 80 gallon tanks.

Mattei tank mounted compressors deliver:

- >10% extra air storage at no extra cost
- No wear of the compressor's moving mechanical parts
- Pulse-free air
- Compact design
- Low oil volume and consumption
- Direct coupled compressor & motor
- Slow 1,800 RPM rotational speed
- Low maintenance
- Quiet operation

HOW IT WORKS

Ambient air is drawn through a filter into the compression chamber consisting of a stator in which an eccentrically arranged rotor revolves at 1,800 rpm (or less with OPTIMA 11.) An air intake valve automatically adjusts the incoming air volume. The rotor has longitudinal slots in which the vanes slide. Zero-wear vanes ride on a thin film of oil and are held against the stator by centrifugal force. The air is compressed through the contraction in volume of each chamber formed by the vanes, the rotor and the stator wall. Sealing, cooling and lubrication are ensured by the oil injected into the chamber.
