

My Reflections of Radiology

Oh what a day on November 8th, 1895

X-ray technology came alive.

Wilhelm got a hand from his wife

To discover a technique that could save a life

So they established a professional society

So a person could learn and ease their anxiety

First step was to establish schools

To give us the educators, the books and the tools

As time moved on we soon found

Another modality called Ultrasound

After this we continued to expand

We developed CT to give diagnostics a hand

Interventional radiology also continued to grow

There isn't a vessel, a tumor, an orifice they don't know

Physics proved that a magnet can compete

So MRI came on board to make our department complete

Reflections of the past in our profession is okay

Hand processing, auto processing, CR, digital x-ray

Last but not the least is the leadership that keeps us united

Celebrate, Be Proud, Keep on top of the technology and remain excited.

Happy Tech Week – 2014, Eileen
