

Use of mobile devices in healthcare

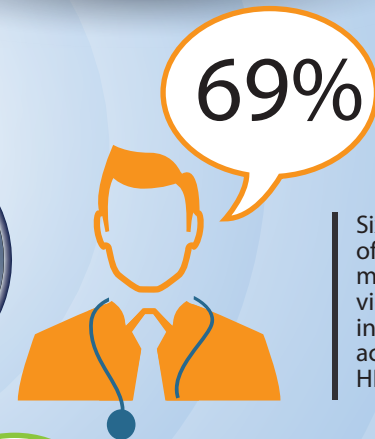

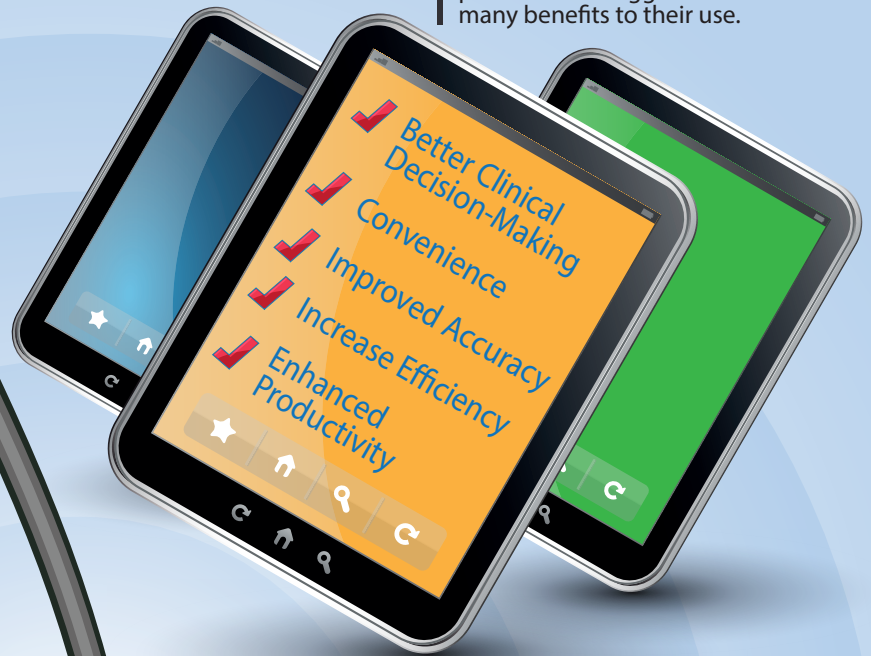

59% hospitals have a mobile policy
29% are developing a policy

9 out of 10
providers will
have a
smartphone
by 2014

Studies regarding the use of mobile devices and apps by healthcare professionals suggest that there are many benefits to their use.

Sixty-nine percent of providers use a mobile device to view patient information according to HIMSS Analytics

Thirty-six percent use mobile technology to collect data at the bedside per HIMSS Analytics

Although pharmacy management is the most leveraged ancillary service on mobile devices, there is a growing market for laboratory, cardiology and diagnostic imaging data access .
