RP Visual Solutions Debuts New LED Mounts

Anaheim, Calif. May, 2013 – RP Visual Solutions (RPV) debuts three new ways to mount LED based displays. The new LED-specific mount types include: EZ Lift, X-Arm, and Swing.

All of these mounts feature front access for display serviceability: the EZ Lift mount lifts up for access, the x-arm maneuvers via two 'X' brackets and pulls straight out, while the swing mount swings open and offers 6-axis adjustability. To ensure extra rigidity and consistent seams, the mounts are CNC laser cut from precision formed black powder coat welded steel.

“The evolution of high resolution direct view LED Displays, along with our years of delivering the best seams in matrix panel solutions—has helped RPV create a host of options for both front and rear access service mounts,” said President Randy Pagnan, “Sub 4mm dot pitch LED, including SCT’s recent 1.9 mm display, requires the best in mounting structures to ensure a great visual affect. RPV’s mounts exceed these requirements.”

RPV will be exhibiting in booth #2933 at InfoComm this June in Orlando showing innovative ways to mount flat panel arrays.
