NEXAWEB SERVICES

Your success is our top priority

Professional Services

Nexaweb offers a full range of professional services to ensure the success of your project and enable you to build your team's expertise with the Nexacro Platform.

Nexaweb's professional services engineers will work side-by-side with your team, providing the help you need whether that's point expertise, on-demand coaching, or staff augmentation. We'll help with mobile application development questions, integration with data sources or other applications, and effective development processes. Should your needs be larger in scope, we can provide full application implementation services, including program and project management.

On-site Expertise

Leverage the deep platform knowledge and experiences of our team members by including them on site. They'll provide instant answers to any questions you may have and mentor your team members in the use of the Nexacro Platform.

Staff Augmentation

If you need additional hands to accelerate project progress, our professionals are ready to help. With their strong Nexacro skills, they'll shorten delivery times, whether working side-by-side with your team members or remotely.

Mobile Application Development

Need a mobile application developed quickly but don't have resources available to build it? Nexaweb will build to your requirements – again, at your site or ours, based upon your needs.

Internationalization and Localization

Our team is fully versed in building internationalized applications and will work with your localization team (or one we recommend) to produce internationalized and localized applications.
