

A FUEL MANAGEMENT PRODUCT THAT TALKS TO YOUR BOTTOM LINE

INTELLIGENT FUEL MANAGEMENT

Fuel theft, fraud and abuse have a huge impact on the profit margins of Fleet Operators, and in some instances have resulted in companies having to close their doors.

The market is flooded with various anti-siphoning devices, alleged smart cards and "theft or fraud" proof electronic fuel dispensing systems. While some of these products have contributed to reducing fuel theft or fraud, they have done little to prevent this practice from continuing. Based on analyses done by us, as well as various high profile fuel fraud investigations, there is an indication that fuel theft or fraud is on the increase.

Intelligent Fuel Management is a unique Fuel Management System, which has made a huge impact on the market.

Top transport companies and vehicle fleet owners have outsourced their fuel management to us - where **every single fuel transaction is managed on a daily basis through our Bureau Centre using the Fuel Manager system.**

Intelligent Fuel Management has the following unique features:

- **Colour coded warning indicators** such as;
 - Excessive fuel consumption.
 - Low fuel consumption.
 - Suspect low odometer reading.

- Suspect high odometer reading.
- Static odometer readings.
- Tank capacity exceeded.
- Weekend refuel.
- Suspect registration number.
- Suspect consumption norms.
- Out of boundary fuel stations

- **Daily fuel alerts are generated** via e-mail and cover the above and any other fuel related discrepancy. The alerts contain detailed information of the discrepancy. It is then sent to a designated person within the company, as well as to the fuel station where the potential abuse took place. Oil companies, banks and third party representatives are also copied on all alerts resulting in a collective effort to address the alert issued.
- The biggest attribute of our system is its **ability to determine potential fraud, theft or abuse with an** above 90% accuracy - highlighting the date, time and location of the potential fraud, theft or abuse. Our system then quantifies the potential losses incurred in litre and rand value.

These features have changed the mind set of fleet operators who now look at fuel consumption in a very different light. Instead of looking at fuel consumption figures resulting in some fleet operators justifying the excessive consumption, **our system enables them to now look at rands and cents, which have a direct impact on the bottom line.**

Bureau Centre

Outsourcing your fuel management to Avis Fleet, ensures that your fuel is managed on a daily basis, per transaction, in a consolidated database. This means that we can accommodate various different sources of fuel data from different service providers and manage it in a single database.

The Bureau offers the following;

- **Electronic import** and editing of data to ensure accurate fuel consumption calculations.
- **Daily detailed fuel related alerts.**
- **An audit trail - keeping record of all editing and e-mails sent.**
- **Weekly fuel usage reports which** include various reports, supported by graphs, including a summary usage, actual vs normal comparison, CPK, top 15 potential losses and various other management reports.
- **A month end report pack including detail such as:**
 - a fuel summary report
 - top 15 loss report
 - detailed reporting per vehicle
 - detailed reporting top 15, including actual vs norm,
 - CPK, litre and rand loss graphs,
 - usage per cost centre,
 - usage per vehicle make,
 - usage per fuel station.
- Reports are e-mailed to the designated

recipients and an overview of the account is given, including potential % loss, individual suspect vehicles and suspect transactions.

Cost Saving

The efficiency of our Bureau Service is measured in the cost savings achieved on a monthly basis. Collectively we have saved our Bureau clients millions of Rands on their fuel bill. Various cost saving case studies will be shared with you during a formal presentation with contactable references.

Afford Avis Fleet the opportunity to manage the single most important variable cost factor in your fleet, to assist you in reaping the benefits of a profitable business.
