

QWICKBUILD

Revolutionary sub-frame system

for: ECODECKING / hardwood / tiles

Product overview QWICKBUILD is an innovative deck sub-structure system which replaces traditional building materials with marine grade aluminium frames and stainless steel fasteners. The system is extremely easy to use, slashing installation time from days down to hours, making it equivalent in cost to timber structure once installed. QWICKBUILD is supplied as made-to-measure frames or kitset assembled on site.

Benefits QWICKBUILD offers benefits unmatched by any other decking construction methods. It is 100% unaffected by moisture offering vastly superior durability and dimensional stability compared to any other construction method. It spans 200% more than equivalent sized timber and the number of structural post and pile supports are reduced by approximately 50% and it cantilevers 50% of full span. (See Fig 1.1 and 1.2 of QWICKBUILD vs Traditional timber deck structures).

QWICKBUILD is an excellent council compliant solution for building decks over waterproof membranes, allowing access and ventilation whilst maintaining the membranes integrity.

Installation QWICKBUILD can be installed over soil/membrane or concrete pavers. QWICKBUILD is a complete system intergrating with any of OUTDURE's ECO-DECKING composite decking board and accessories range, when used with ECO-DECKING it is the world's first decking system to eliminate screws for fastening the decking boards to the deck frame. QWICKBUILD frames can also be used with hardwood and engineered tiles.

QWICKBUILD for tiles A new product in the OUTDURE range which enables the installation of structural, engineered tiles at any height above ground level. QWICKBUILD for tiles also eliminates requirement of a concrete pad. All OUTDURE products are suitable for residential and commercial applications.

QWICKBUILD Sub-frame system can be used as a sub-frame to support:

ECODECKING

A fully integrated system for every decking application

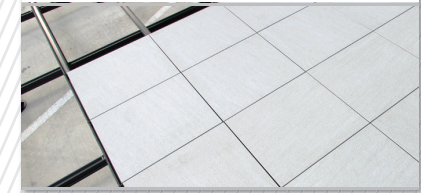

Hardwood

The best way to install hardwood timber onto a floating deck structure

Structural tiles

Eliminate 100's of deck jacks and speed up install time

OUTDURE Products and systems are ideal for decks installed over:

Over soil

Eliminate up to 50% of timber piles and concrete footings

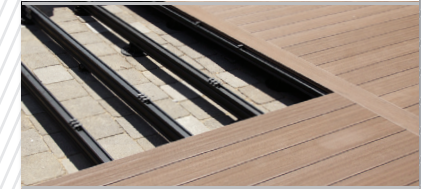

Over membrane

The only solution for decks over membranes -100% council compliant

Over concrete/pavers

Fast and effective way to deck over existing concrete/paved areas
