

Every company has problems.
Ours has solutions.

Services For Your IT Needs

At NuWave, we strive to design and deploy applications that exceed customers' expectations, avoid unnecessary technical complexity, and result in efficient, extensible, and maintainable solutions. We deliver real end-to-end business critical applications, helping organizations to improve the way their business functions. We pride ourselves on the high caliber of our consultants' technical abilities and management experience, and on their diverse industry and cultural backgrounds. They are all multi-platform application specialists and architects of widely used, proven technologies.

“NuWave provides excellent customer service, great attention to detail, accessibility, and a professional approach.”

—Manager at U.S.
Government Agency

Business Process Management (BPM)

In almost all companies, the success of their operations depends on the performance of their business processes. Having bottlenecks in these processes can decrease the competitiveness of a corporation by slowing the time to market. NuWave's expert team will optimize the processes that need the most improvement, such as converting a paper-based system to an electronic system, vastly increasing the flow of business.

Systems Integration

Integrating disparate systems can be a daunting prospect. At NuWave, we understand that when linking your systems and applications, any new solution must complement these systems and business processes to provide you with the most benefits. So not only will you get a great software solution to meet your integration needs, but the flow of business will not be disrupted during the process.

Other Custom Development Services

With business demands constantly changing, applications often need to be developed or modified in order to keep up. You may need to increase productivity or functionality, and more often than not, you are also hoping to reduce costs. NuWave's expert team can develop your solution in a timely fashion so that you can reach your goals. We begin with a thorough understanding of our client's requirements, then develop a proof-of-concept prototype to demonstrate and validate our design philosophy and the basic functionality. Our clients' needs are so important to us that we actually guarantee that the prototype will meet their requirements.

CUSTOMER SPOTLIGHT

One of our customers had initiated an upgrade of two of their custom, mission critical software applications through the integration of common off-the-shelf (COTS) software. The organization worked with another services provider on this project for three years and spent about \$60 million with no tangible results. NuWave started this project with a fresh perspective and completed the database conversion and proof of concept in only one year, for a small fraction of what they had spent previously. Since our founding in 1999, this client was one of our first, and they have been relying on our advice and expertise ever since.

“I would hire NuWave again if the opportunity arose. It was a great experience overall.”
