

## ***A Portal to Empower the Physician's Surgical Practice***

AmkaiLink is a secure, web-based portal that provides ASC and surgical hospital physicians and their practices with remote access to key surgery center functionality. With the AmkaiLink add-on for AmkaiOffice, you can keep your surgeons informed, while reducing scheduling errors and increasing time and labor efficiencies.

### **Scheduling cases made easy**

- Select one or several physicians from your practice and a calendar displays the blocked times, booked and pending appointments, and free time for each physician
- Requests are as easy as clicking on the appropriate time slot, filling in the necessary information and clicking "Send"
- Status of appointments changes from "Pending" to "Booked" once the ASC has scheduled them
- Delete or update a pending request from within AmkaiLink
- Printable appointment list gives physicians access to their schedules when they cannot get online

### **Simple data submission**

- Appointment requests can include basic demographic and detailed insurance information, and other pertinent data
- Attach files such as an H&P or images of a patient's driver's license and insurance card

### **Billing information at your fingertips**

- Once a procedure has been performed, the necessary procedure and diagnostic codes can be viewed on the portal
- This data can be printed out for filing and other paperwork
- No need to call the ASC for billing information

"AmkaiLink has really helped improve our front-end operations, eliminating 99% of paper booking sheets for six practices representing 11 physicians. **The electronic portal improves accuracy and makes for more efficient scheduling of cases.**"
