

YOUR RELIABLE PARTNER IN NITROCELLULOSE

Global supplier

By providing nitrocellulose to over 70 countries in all continents, Nitro Química has stood out as a world-class company in product distribution reliability. Its quick response to customer needs, along with a high level of flexibility, has been established through strategic partnerships with logistics suppliers in the most diverse modes, thus guaranteeing delivery within the timeframes agreed.

Technology ensures quality

With a highly qualified team and constant investments in laboratory equipment and infrastructure, Nitro Química has built a knowledge basis that allows researching new applications, products, processes and raw material development. It has become, therefore, the global technology leader in nitrocellulose. Furthermore, Nitro Química is registered in the REACH* and its nitrocellulose is compliant with this regulation for trade in the European Community.

* The European Community Regulation on Chemicals for Registration, Evaluation, Authorisation and Restriction of Chemical Substances

Cia Nitro Química Brasileira was established in 1935 and is currently the world leader in nitrocellulose, with operations that reach over 70 countries across the five continents. About 70% of its production is exported to a wide range of customers. Nitro Química is currently the major exporting company in its segment.

A sulfuric acid producer as well, Nitro Química holds the highest management, technology and production process standards.

Through an integrated and high-yield operation, Nitro Química ensures the effectiveness of its products' performance in a wide variety of applications, ranging from printing ink, varnishes and cosmetics to fertilizers and mining.

**Everybody is talking about conscious consumption.
We believe we should start with conscious production.**

For over 75 years Nitro Química has been following the changes in the world. And none of them has caused and causes so much concern as the changes in the environment. That is why sustainable development has been our commitment even before it became a priority. It was with this philosophy that we achieved worldwide leadership in nitrocellulose supply. As a matter of fact, we achieved this goal developing the greenest resins in the world, with advanced technology, which turn packaging ink, cars, wood and cosmetics into ecologically correct products. Because we must consider the beginning and end of a product's life in order to preserve the future.

Social responsibility and sustainability

Nitro Química's actions are not restricted to preventing an environmental impact.

They include improvements to the local community and to its employees' quality of life as well. These are examples of actions that improve the quality of life of the community to which we belong:

- Family Action
- Local History
- Safety Simulations
- + Life

In 2006, Nitro Química received the Energy Preservation Award granted by FIESP (*) for the efforts to reduce power, natural gas and water consumption per ton of product manufactured.

greencell

80% bio renewable

Wetted with Ethanol (35%) and with 80% of bio renewable raw materials

ecocell

50% bio renewable

Wetted with Isopropanol (30%) and with 50% of bio renewable raw materials

With these new trademarks Nitro Química wants to emphasize its constant commitment to the environment and to its customers' sustainable growth.

Green solutions from the greenest place in the world

Brazil has achieved a prominent global role in the past few years. This prominent role is not only due to the achievements in its economy, but also to breakthroughs in other areas.

One of them is in nitrocellulose. Nitro Química has developed a technology that allows producing a nitrocellulose that is unique in the world, with 80% of bio renewable raw materials.

Such a remarkable achievement made Nitro Química become the first company certified by NAPIM (National Association of Printing Ink Manufacturers) to offer the two most ecological nitrocellulose products available in the global market: Greencell and Ecocell.

Nitro Química.
The only one to produce the most ecological resin in the world, with 80% of bio renewable raw materials.
