

MAX

MAX ANYWHERE

Take MAX anywhere the action is.

MAX Anywhere is a simple-to-use, web-based application that makes your most frequently used ERP features accessible with a compatible web browser on desktops, laptops, and mobile devices. With MAX Anywhere, you keep your onpremise solutions and gain remote and web-based accessibility

BENEFITS

1. Access real-time MAX data from any smartphone, tablet, laptop or desktop computer running a compatible web browser.
2. Decrease the time it takes to translate activities into MAX, resulting in faster turn-around times in the Order to Build to Ship process.
3. Enter orders, conduct a full range of inventory transactions, and more right from your mobile device.
4. Unchain your employees from their workstations and give them the flexibility to get business done from anywhere .

The fact is, work can't always be done at a desk or at a workstation. There may be times when your managers or employees need to access and update information in MAX from somewhere besides their designated workspace.

Exact has a solution. With MAX Anywhere, you can extend the usefulness of the ERP technology you've already invested in and give your team the flexibility to access the MAX information they need from any smartphone, tablet, laptop or desktop computer.

Unlike other mobile ERP solutions, MAX Anywhere requires no app store purchase or installation. Simply log in to MAX Anywhere with a compatible web browser and directly interact with your live MAX database in real time. No sync or batch updates are required because there is no data stored on local devices.

Mobility For Your Entire Team

MAX Anywhere offers a full range of benefits for everyone from sales, to management, to your shop floor personnel. The application is organized into three key areas:

Sales Management

- Remote sales teams can instantly access customer information, enter quotes or sales orders, and check part availability in real time.
- While out in the field, sales managers can stay on top of performance by quickly viewing dashboards that show the top performing sales reps, most sold parts, the biggest sales orders and more.

Materials Management

- Inventory Control Personnel can take MAX with them anywhere in the warehouse to reduce errors and solve problems at the source.
- Your employees can instantly find answers to their questions and capture data in real-time.
- Automate your way to efficiency & accuracy without large investments in hardware.

Shop Floor Management

- Keep your best people out on the floor doing what they do best.
- Work with fewer limitations and allow for more timely data capture.
- Managers can connect with your workforce and oversee your shop floor with MAX at their fingertips.

By utilizing the tools that come with MAX Anywhere, your Executive Management team can enhance the value that they extract from your investment in MAX. For example:

- Top management can use the MAX Anywhere Dashboards to monitor performance anytime, anywhere instead of waiting for month-end reports.
- Course corrections can be put in place much faster to ensure your actual numbers stay more closely aligned with budgeted numbers.
- Busy executives can increase the effectiveness of the mobile technology already at their disposal.

Technical Specifications

MAX Anywhere is a webbased application built in HTML5 and .NET. It is not resident on mobile devices, but is a browser-based application which is intended to be hosted on your web server (IIS) and accessible via web browsers on desktops, laptops, and mobile devices.

Although setup is required to ensure MAX Anywhere is properly connected with your MAX system, there is no installation required on any devices used to access MAX Anywhere.

The MAX Anywhere Materials Dashboard shows how the screen layouts will automatically be optimized based on the size of the device you are using.

Unlike most mobile add-ons to on-premise ERP solutions, MAX Anywhere allows you to use transactional components of your ERP system. Enter quotes and orders, conduct real-time material transactions, receive POs, and more.
