## INNOVATIVE SPECTRAL IMAGING

Innovative diffractive optics technology is fundamental to everything Headwall produces. Headwall's own proprietary high-performance diffraction gratings deliver unparalleled, aberration-free imaging performance. Our hyperspectral and Raman instruments are based on all-reflective designs that feature important characteristics such as high SNR, low stray light, very high spatial and spectral resolution, excellent thermal stability, and small-form-factor designs. Headwall combines this advanced optical expertise with collaborative engineering and high-volume manufacturing to move designs from prototype to production rapidly and cost-effectively.

## DIFFRACTIVE OPTICS

## REMOTE SENSING

### NANO-HYPERSPEC®

- ▶ For any airborne application (incl. small UAVs)
- ▶ VNIR (400-1000nm)
- ▶ Integrated data storage
- ▶ ~ 1.4 lb. (3" x 3" x 4.7")

### MICRO-HYPERSPEC®

- ▶ Small size, weight & power (SWaP)
- ▶ Aberration-corrected imaging
- ▶ Wide field of view
- ▶ Multiple COTS configurations available
- ▶ ~ 2 lb.

### HIGH-EFFICIENCY HYPERSPEC®

- ▶ High-performance airborne hyperspectral
- ▶ Aberration-corrected imaging
- ▶ Wide field of view
- ▶ Multiple COTS configurations available
- ▶ ~ 7 lb.

Gimbal-mount  
(courtesy Advanced  
Coherent Technologies)

### HyperCore™

- ▶ Data-acquisition for connected sensors
- ▶ Provides true 'sensor fusion'
- ▶ 500GB internal storage
- ▶ Connects hyperspectral, GPS, LiDAR, and more
- ▶ Size in mm: 90 x 76 x 70
- ▶ Weight in kg: 0.59

## AIRBORNE, GROUND-BASED, LABORATORY

### VNIR-SWIR Co-Registered Pixels

- ▶ Wideband coverage (400-2500nm)
- ▶ Co-registered pixels for image accuracy
- ▶ Single VNIR-SWIR datacube
- ▶ Small and lightweight package

### HYPERSPEC®

- ▶ Aberration-corrected imaging
- ▶ High spatial and spectral resolution
- ▶ Lens-based or multi-channel fiber
- ▶ Ideal for a wide range of hyperspectral sensing applications

### HIGH RESOLUTION CHLOROPHYLL FLUORESCENCE

- ▶ Precise, high-resolution imaging between 754-775nm
- ▶ User-selectable 20-30nm increments using drop-in diffraction gratings
- ▶ Best-in-class SNR performance
- ▶ Smaller and lighter than competitive offerings

### HYPERSPEC® INSPECTOR

- ▶ High-speed, advanced machine vision
- ▶ Aberration-corrected imaging
- ▶ Frame rates to 236 fps
- ▶ Environmentally protective enclosure

## HYPERSPEC® DEPLOYMENT MODES

### AIRBORNE

Headwall's industry-first partnership with Leica Geosystems presents the remote sensing market with complete airborne solutions that pair a custom UAV with advanced hyperspectral imaging capabilities. The solution includes GPS/IMU, optional LiDAR, and full application software for managing sensor operation and post-processing tasks such as ortho-rectification.

### ADVANCED MACHINE VISION

#### In-Line Inspection

- ▶ Seamlessly integrates with robotics
- ▶ Outstanding discrimination
- ▶ Fast frame rates
- ▶ Rugged, environmentally robust

### GROUND-BASED

#### Pan & Tilt

• mast • tower • vehicle

#### Point & Stare

fully motorized, rugged

integrated scanning mirror

### STARTER KIT

- ▶ Use with Hyperspec® sensors
- ▶ Provides hyperspectral analysis of reflective materials
- ▶ Illumination kit
- ▶ Gantry
- ▶ Moving web

## RAMAN IMAGING INSTRUMENTS

Headwall's Raman imaging instruments are best in class for a wide range of high-performance applications. Key attributes include:

- ▶ Small and compact
- ▶ Exceptional SNR
- ▶ Short integration time
- ▶ Tall entrance slit for high spatial resolution
- ▶ Process separate calibration and radiometric reference channels
- ▶ Minimized image distortion and channel crosstalk

### APPLICATION AREAS

- ▶ Deep-sea exploration
- ▶ Chemical threat detection
- ▶ Petroleum
- ▶ Biotechnology
- ▶ Temperature measurement
- ▶ Medicine
- ▶ Material characterization
- ▶ Non-invasive analysis

### Available Laser Excitation Wavelengths

248nm	785nm
532nm	830nm
532/655nm dual excitation	1064nm
632.8nm	

## DATA PROCESSING & SOFTWARE

### Hyperspec® III Software

- ▶ Controls the sensor and acquires images at very high frame rate
- ▶ Correlation of image data to gps data (airborne)
- ▶ Trigger image acquisition from gps coordinates (airborne)
- ▶ Real time Waterfall display
- ▶ 3-band jpg reference image output
- ▶ ENVI compatible data file output

### Hyperspec Data Processing Unit

(compatible with Hyperspec® sensors)

- ▶ Quad-core processing
- ▶ 8GB DDR3 RAM
- ▶ 512GB or 1TB solid-state hard drive
- ▶ Stream up to 400 fps
- ▶ Standard and Compact versions available

### Airborne package

- ▶ High-speed processing
- ▶ Solid-state storage
- ▶ Application software
- ▶ GPS/INU
- ▶ Fan-less design
- ▶ Lightweight/compact
- ▶ Orthorectification available
- ▶ CameraLink & USB
