# PLOTBOX

Records Management

The core modules of PlotBox focus on one place to keep all your records related to a plot intuitively linked to each other. With one click you can see who owns the plot and who's buried in the plot along with any other records related.

- The Quick names search feature takes you directly to burial site by dropping a blue pin anywhere with a matching name
- The Advanced Filter allows you to quickly and easily narrow your search by date of death, birth date and even occupation
- The Records module can also be used without mapping. Data is searchable and results can be presented in list format also giving you the option to export details directly into Excel

- PlotBox Records Management allows you to attach images to records which means that you can display headstone images and paper records relating to the deceased

- The Activity Log feature gives a full history of the record telling you which user did what, where, when & how, giving you great accountability for managing your cemetery
