

## System Requirements

Supported browsers include a version of Internet Explorer currently supported by Microsoft.

The verisae.com domain needs to be added to “Trusted Sites” in Internet Options – Security. A browser security setting of “medium” for Trusted Sites will allow the required settings to function properly with the Verisae system.

If a setting of “medium” is not allowed for Trusted Sites by company policy, the following settings are required for verisae.com domain:

- JavaScript is enabled
- File download is enabled
- Pop-up blocker is disabled
- Allow Cookies is enabled
- ActiveX controls are enabled
- SSL (Secure Socket Layer)

In addition, for proper kiosk operation, any auto removal of cookies must be disabled.

For optimal performance we recommend that your computer has the following:

- A high-speed Internet connection > 512 Kbps (minimum of 128Kbps),
- A minimum screen resolution of 1024 x 768, and
- Internet Explorer 10.0 or greater.
