If it's built to
Perform, it's built on
Microsoft

Microsoft Platform Solutions

Productivity. Collaboration. Affordability. Anywhere access. You name it and chances are, our Microsoft Solutions have got your business needs covered.

We really don't like to play favorites, but we have a soft spot for Microsoft technologies. We live it, we breathe it and we just plain love it. Microsoft provides a platform for real-world solutions that work and DynTek is an expert in implementing those solutions. We thrive on bringing together Microsoft technologies and innovative designs to create business solutions that help solve your everyday business challenges.

DynTek also offers flexible engagement models. We can guide you through the entire implementation cycle of a solution, or serve as your technology advisor. Either way, our main goal remains the same...we strive to leverage our depth of experience in Microsoft technologies to ensure that your IT service needs are met through the right approach and strategy for your company.

Our Team of Experts

Technology is only as good as those who implement it. As a Microsoft Gold National Systems Integrator, DynTek customers can be confident that our solutions are architected and implemented by a team of top-notch certified Microsoft specialists, technologists and consultants. Our team is made up of those who are passionate about Microsoft technologies. They're Microsoft MVPs,

Microsoft Partner Advisory Council members and Microsoft Technology Professionals who thrive on all things Microsoft. And the best part is...they love to share their expertise with you and build Microsoft-based technology solutions that meet your needs, and then advise you on how to best leverage your investment moving forward.

Our Solutions

Utilizing Microsoft technologies, we have designed, architected, and implemented solutions for all types of companies that have dramatically reduced the cost of

operations, increased employee productivity and collaboration, safeguarded business data, and much more.

8, 12, 365 - those are the digits we are coveting now. As in Windows 8, System Center 2012 and Office 365. In the office, at home and on line you will find us using Microsoft technologies -- simply because we believe in what they provide. Just ask our employees who can't stop talking about how great the next big Microsoft release is.
