An end-to-end, **Strategic Approach** to Security

IT Security Solutions

Security is one of those things that touches all areas of a business environment, including an organization's physical and virtual infrastructure; data and information; applications; people and identity; and network, server and end points. Can you be sure that your business-critical information and IT environment is secure?

An IT security solution from DynTek helps organizations meet and manage their toughest business challenges. By focusing on business innovation, we safeguard your operational processes across all risk domains. From performance issues to risk management to compliance with government regulations, we offer a smarter, business-driven approach to security compliance that helps you achieve your desired security posture and meet your business and regulatory requirements.

We Know Security

DynTek understands where your critical data lives and has methodologies in place to manage all of the processes associated with classifying, prioritizing and protecting data. By partnering with industry-leading security technology companies, such as McAfee, DynTek has the expertise in creating comprehensive and holistic security solutions that match your organization's needs.

DynTek Named McAfee Government, Health & Education Partner of the Year in 2010, 2011, 2012 and 2013!

Let DynTek create a security solution that protects your business information and thoroughly safeguards your entire IT environment. Our solutions will not just provide the essential protection your business needs; you'll also have control over how information is used so you can protect your business and the information on which it relies. Our range of solutions addresses the latest security challenges faced by enterprises that need to meet compliance goals, manage risk, and embrace emerging technologies and platforms — without compromising security. Our solutions include the following:

- Cloud Security
- Compliance
- Consumerization of IT
- Critical Infrastructure Protection
- Data Center Security
- Managed Security Services
- Embedded Security
- Risk Management
- Virtualization
- Web 2.0
- Secure Mobility

We have mastered the best practices vital to a successful security rollout. We test solutions ourselves by dreaming up possible threats to organizations large and small...and we actually think it's a good time. Our pleasure is your benefit; because we not only live this stuff...we love it! So just relax, and know your business critical information is in good hands.

Benefits:

- Identify and protect against internal and external threats
- Gain total risk management
- Stay ahead of emerging threats
- Security controls
- Prevent exploitation of sensitive structured data stored in databases
- Avoid the pitfalls of database breaches
- Comply with industry and government regulations

What Sets Us Apart

Outstanding technical acumen? Amazing customer service? Yes, we have those things and much more.

But let's dive past the rhetorical statements and focus on what truly makes us unique. In the world of technology, certifications and accolades, combined with deep real world experience, are the golden ticket. And, we like to call DynTek the company of accreditations. After all, we have worked hard to obtain these third-party validations, which prove

our organization has the technical expertise, account management knowledge, proven experience and high level of customer service excellence required to truly be called the best. And whether we are diving into cutting edge technologies in the cloud or architecting an advanced networking solution, DynTek's certifications are second to none.

Pride In Partnership

DynTek holds the top medallion levels across a broad range of industry-leading technology manufacturers. When looking for a partner that is **Cisco Gold, Microsoft Gold, Citrix Platinum, McAfee Elite, VMware Premier, Dell Premier**, and more...you will find one - DynTek.

This means we have an unrivaled cross-section of technical expertise and real-world deployment experience, as well as competitive pricing on the technologies you need most.
