

## Real-Time ERP for Macola

*WiSys Real-Time ERP* allows you to record all business transactions at the first touch point in the organization. Our adaptable tools automate business processes and allow agile business decisions based on real-time data through: Business Intelligence, Warehouse Management, Production Management, Order Processing, Shipping, and Packaging with Pallet Management, and Bin/Serial/Lot control.

## First Touch Point in the Organization

An example of the value of recording a transaction at the first touch point would be in picking and shipping. Traditionally, shipments are recorded in the ERP system as an inventory reduction after they have been written on the pick ticket and then keyed in at a later date. In a real time environment the reduction of material would be recorded as soon as it is taken from the shelf which is the first touch point of inventory movement. This means inventory on hand information is accurate to the second to allow for rapid and accurate business decisions.

Through real time recording of data you will benefit from reduced costs, reduced data entry errors, improved customer service, reduced inventory, compliance, and the ability to expand without additional personnel. Our solutions provide a very high ROI based on obvious and tangible cost reductions.

WiSys offers several solutions that help your company to record transaction at the First Touch Point in the Organization.

- Warehouse Management
  - Mobile Barcode Scanning
  - o Barcode Printing
- BI Desktop Agility Explorer
  - Process Grids
  - o Importing Spread Sheets
  - o Outlook Add-In
  - o Dashboard Information
- Manufacturing
  - Shop Floor/POP Material Issue/Return
  - Shop Floor/POP Work Center Reporting
- Shipping
  - Pick Pack Shipping with BOL
  - o Carton/Pallet Packaging
  - UPS/FedEx Integration
  - EDI ASN Shipping Integration
- Developer Options
  - Agility Design Studio
  - Visual Form Studio
  - o .Net Business Objects for Macola Transactions
- Smart Device Integration coming soon

## **Business Intelligence Execution**

Business Intelligence Execution is both about executing on Business Intelligence and using Business Intelligence to execute. A major barrier to implementing Business Intelligence is the relevance of the data being analyzed. WiSys offers Business Intelligence that is implemented in conjunction with the above solutions. By recording business transactions at the first touch in the organization Macola data becomes relevant so that Business Intelligence becomes a powerful decision tool.

WiSys has integrated the Developers SDK into Business Intelligence solutions. This allows customers to map business intelligence results to business transactions. This means business decisions are instantly transacted rather than re-keyed into the ERP system eliminating transposition errors and costly personnel time.

## Adaptable Framework

WiSys products are designed on an adaptable framework called Agility, which is a framework designed as a tool for consultants and customers alike.

Every company has unique processes and the level of ROI obtained from implementing a system depends on how a system adapts to the user rather than how the user is required to adapt to the system.

<u>Agility Design Studio</u> – A robust design environment that allows you to design very specific Business Intelligence Execution components.
