

# MedicsCloud EHR for Behavioral Health:

## Making EHR Sense for your Addiction Disorders Practice

The MedicsCloud EHR for Behavioral Health (BH) is extraordinarily well designed with numerous features and capabilities for Addiction Disorder / Substance Abuse practices of every size and scope.

The system is *specifically designed* with templates for Psychiatric Evaluation, Intake, Medical Assessment, and more. Outpatient, inpatient, partial hospitalization, Therapeutic Learning Centers and Detoxification settings are all supported by MedicsCloud for BH.

The system integrates BH and medical services, resulting in an outstanding **Continuity of Care** capability.

In addition to being **JCAHO** and **CARF** assessed, a partial listing of the system's BH-specific capabilities includes:

ICD-DSM Coding

Medication Management

Social Activities

Treatment Plans

Multiple Visit Type Options

Clinical Justification

Substance Abuse

Session Notes w/ Psychiatric  
Medication Check

Mental Status Exam

Outcomes Measure

Documenting Goals

Current Behavior

Patient Support Systems

CBE, Child CBE, CBR

Psychological Trauma

Violence Risk Factors

Documenting Intervention

Sadness Scales

Suicide Risk Factors

Transfer / Discharge Options

Program window displays all milestones associated with the resident or person receiving treatment.

The **Documentation Type** allows the user to easily select documents such as Intake, Treatment Plan, Progress Plan, and more.

User-defined **Reminders** can be sent to specific patients and / or system users, or providers for any number of Reminder reasons.

**Outcome Measures** is a powerful management tool in determining an overall view of the person's condition, from admission to discharge. Medication compliance, 12-Step Involvement, relapse prevention are included in Outcome Measures.

MedicsCloud's **Diagnostic and Statistical Management (DSM)** includes extensive information on Axis-I to Axis-V diagnoses. Axis-V contains the patient's GAF score.

The **Mental Status Exam (MSE)** is comprised of sections on the person's psychiatric history, appearance, memory, mood, concentration, sleep, appetite, thought form, sensory / cognitive orientation, etc., helping to create a Psychiatric Formulation.

**Medical Assessment** compiles information on the person's medical history and current status helping to arrive at the treatment plan.

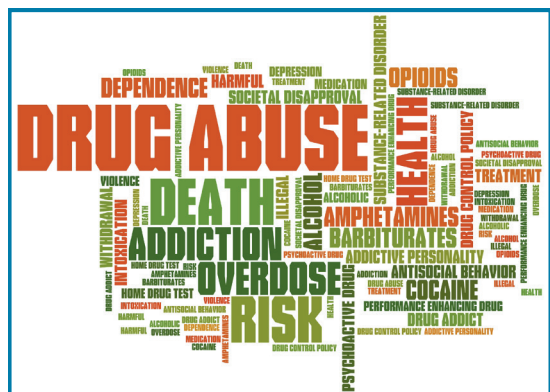

The **Comprehensive Intake Assessment** is a multi-dimensional assessment instrument based upon Integral Psychology.

Secure **Intra-Office messaging** between providers and staff.

Behavioral Health-related **Reports** available.

**Appointment Scheduler** identifies appointment types such as Depression, Group Therapy, Individual Therapy, Psychiatric Evaluation, Initial Assessment and more, including user-defined appointment types.

If applicable to your setting, **MedicsRx** is available for electronic transmission directly to the pharmacy, and will track medications prescribed, dosages, refills, interactions, allergy, and more.

MedicsCloud for BH can also be implemented on the organization's local server(s) if that format is preferred.

When combined with **MedicsPremier™** for wide-ranging Behavioral Health practice management and EDI, a comprehensive single, unified Suite is created managing the clinical and business sides of the organization.

**Medics BedManager™** and **MedicsCRM™** are supported for organizations that need either or both.

ADS provides timely Implementation, thorough Training and excellent ongoing support with updates.

Contact ADS for more information, or to schedule a personalized overview of MedicsCloud for your Addiction Disorders / Substance Abuse organization.
