

Enhancing Patient Care & Safety with Better Communication

Secure[®]
Care
Products, LLC

The best way to provide the greatest quality care for patients is to be able to have an expedited response time to any and all situations. Having the best security system in place is key and by adding on the use of a mobile application to communicate security events, care givers are now given the opportunity to keep their focus on their patients. With a mobile application that communicates via smart phones and tablets care givers are no longer glued to the areas in which the security equipment is located. They can move about the facility freely and as soon as an event happens they will receive all the information they will need directly to their mobile device to be able to react as soon as possible. The mVision mobile application allows facilities to completely customize their communications of events that happen within their Secure Care Products security system.

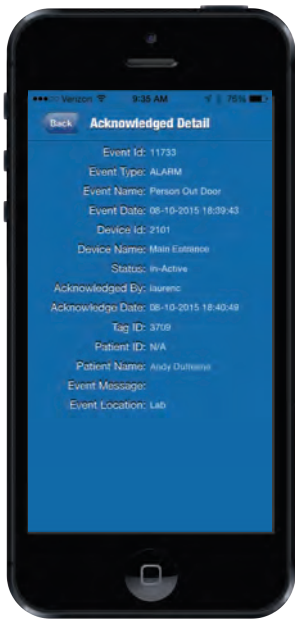

The Garlands of Barrington, a retirement community located one hour northwest of Chicago, is proud of its “next generation” approach and full continuum of care for adults 55 and older. Inspired by a small group of long-time Barrington residents and businesspeople, The Garlands represents a new paradigm in care offering comfort, convenience, and peace of mind.

Even the design of the 31-acre neighborhood – set among a park of mature trees and rich landscaping – is based on a unique philosophy of New Urbanism. It’s a pedestrian-friendly campus where housing, work places, shopping, and restaurants are all woven into a “neighborhood feel” of incomparable care and unparalleled quality.

In this setting where “only the best will do”, it came as no surprise The Garlands chose Secure Care Products, LLC of Concord, NH to create an environment that’s open and accessible, yet safe. A Secure Care “DoorGUARDIAN” Resident ID security system was installed in 2014 by SecureCom, a Chicago-based, full-service distributor of Secure Care. DoorGUARDIAN provides a secure perimeter, enabling residents to freely move about the Skilled Nursing, Assisted Living and Memory Care areas to experience a very high Quality of Life. Yet it protects them from wandering away and from potential harm.

During the summer 2015, The Garlands trialed Secure Care’s innovative “mVision” mobile app as an adjunct to the DoorGUARDIAN system. The mVision mobile app allows staff to continually monitor the secure perimeter and protected doors, receiving instant notification whenever a resident, wearing a small but powerful radio transmitter, moved too close to an opened door.

“mVision allows nurses to tend to the needs of our residents while still staying connected to the security system,” said Amanda Hintz, Director of Memory Enhancement at The Garlands. “It allows us to stay focused on our primary mission: caring. We know with mVision we’ll be immediately alerted if a member is ever in danger of wandering. So we can conduct our rounds – caring for our members and spending quality time with them – knowing everyone is safe and secure. The staff really likes it,” she added.

mVision is a mobile app that can be loaded on any Android or Apple iOS smart phone. Working in conjunction with the DoorGUARDIAN Resident ID security system, it follows a highlyconfigurable rules engine to send door alarm information to the phones of caregivers. Alarm notifications can be accepted and handled, or allowed to quickly cascade to the next caregiver in the user-defined list of designated responders.

“It allows us to stay focused on our primary mission: caring.”

“Mobility was key for us”, said Scott Weimer, Maintenance Director at The Garlands. “We didn’t want caregivers tied-down by the security system. We have a great reputation for hands-on, personal care. mVision empowers that level of care by putting the security system right on the hip of each nurse on-duty. The security system moves with them. “

Mike Banach, president of SecureCom, sees the use of mVision at The Garlands as part of their forward-thinking approach to senior care. According to Banach, “The management team at The Garlands is always looking for ‘Next Generation’ technology to provide an ever-increasing level of care for their members. We see the mVision mobile app as yet another example of technology in service to caring at The Garlands. And, as the locally-based, factory-trained distributor of Secure Care Products, we’re happy to facilitate its use.”

According to Al Larose, Executive Vice President at Secure Care, infant security is the next market to realize the benefits of mVision. “Based on our findings, and the rave reviews we received from the many professionals at The Garlands, we’re now ready to introduce mVision to acute care hospitals providing infant and pediatric security. I have no doubt they, too, will embrace our technology as a way to optimize efficiency while providing security,” Larose stated.

The mVision mobile app is now available for sale and installation via any of Secure Care’s locally-based distributors. Visit <http://www.securecare.com/mVision> to learn more today!
