

steplogic

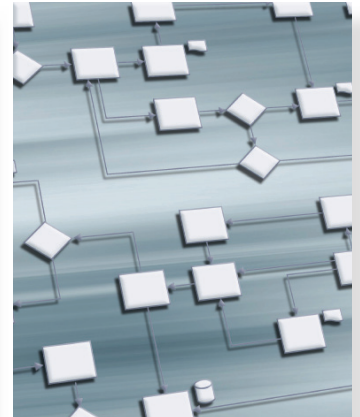

PUTTING POWERFUL NEW TOOLS INTO THE HANDS OF USERS

steplogic is a software development tool that replaces development tasks with configuration steps

- Design new Processes
- Log every input and step for easy research and diagnosis
- Enhance your QA procedures
- Add special handling instructions
- Create Testing Plans

The screenshot shows the steplogic web application interface. At the top, there's a navigation bar with 'Admin', 'Config', 'Execute', and 'Monitor' tabs. Below this is a 'steplogic Sessions' table with columns for 'Last Activity', 'Emp ID', 'Status', 'Last App', 'Last Instruction', and 'Total Duration'. A session is shown for '11/18/2011 12:50:47 MDEEP' with status 'ACTIVE' and last app 'CLUSTER_OPT1'. Below this is a 'Session Steps for Session: XpJdWHD8Yyblpr' table with columns for 'Seq #', 'App Name', 'Step ID', 'Instruction', 'User Response', 'Post Response', 'Failure?', and 'Duration'. The steps include instructions like 'Scan/Enter Cluster Number Cluster 3222', 'Proceed! Cluster 3222', 'Go to location BLU-001-01-0-0', and 'Scan Location to Verify LOC: BLU-001-01-0-0'. The total duration for the session is 3 mins.

If you can envision it, steplogic will help you create it.

Corporate IT staffs are busy. Vendors are expensive and take too long to deliver even simple requests.

These are universal complaints from Operations.

As a result, Operations limps along at less than their optimal performance. Imagine having the ability to create new processes, new reports and other changes so that IT can continue to focus on the big tasks. Imagine having the independence to do these and more without paying an arm and a leg to the vendor. That's what steplogic does!

Users in the warehouse will find it easy to use.

1. Document the steps and decisions in your process.
2. Use steplogic configuration screens to apply the flow and decisions
3. Use steplogic to call or modify scripts or routines
4. Put your new system process into action

FEATURES

- Requires only basic SQL skills
- Can be deployed on mobile devices
- All input values can be verified
- Replicate existing processes to insert new procedures (QA, Packing Instructions)
- Use to kick off processes (reports, labels)
- Create warnings and alerts

HOW IT WORKS

- Works with any Oracle database
- Multi-Level Security defined by User
- Hosted by IIS or Apache
- HTML based messaging
- Can be used for other systems, including TMS, Billing

DMLOGIC – OUR UNMATCHED PASSION FOR WAREHOUSE SOLUTIONS WILL MOVE YOU

DMLogic Capabilities

WMS PRACTICES

- MARC (Red Prairie)
- Mahnattan PkMS
- SAP WM and EWM
- Red Prairie WM
- SaaS WMS

SERVICES AND SUPPORT

- Project Support
- Help Desk
- Software Development
- Process Improvement
- System Administration
- System Optimization

INDUSTRY EXPERIENCE

- Pharmaceutical and Healthcare
- Third Party Logistics
- Retail
- Automotive
- Publishing
- Electronics

LANGUAGES

- RDBMS, PL/SQL, C/C++
- Java, TCPIP, Web Services, .Net, XML, Cobol
- UNIX (Sun, HP, Linux, IBM)
- Oracle, SQL Server

RESOURCES

- Program and Project Managers
- Application Consultants
- Developers and DBA's
- Project System Analysts
- Trainers and Testers
- IT Infrastructure

MATERIAL HANDLING

- Conveyor Systems
- Control Systems
- Pick-To-Light
- RFID
- Print & Apply
- Weighing Systems

About Us

DMLogic is comprised of senior consultants who have spent their careers solving challenges for our customers inside the four walls of their warehouses.

Our capabilities include process design, WMS and MHE. We are experts at WMS, having implemented well over 200 solutions for companies large and small.

Our forte is in extending the use and life of existing WMS systems. We can provide project resources, deliver customized enhancements, provide system support and help desk support.

We build partnerships for the long term, with a solid reputation for customer support and quality work at a reasonable price. We recognize that the work we do is mission critical to the success of our customers.
